TABLE OF CONTENTS

FOREWORD	5
FURTHER INFORMATION	6
SECTION 1 : DIFFERENCES AMONG TTS SURVEY CYCLES (1986-2016)	7
1.1 SURVEY GEOGRAPHY	7
1.2 INFORMED CONSENT	8
1.3 DWELLING TYPES	8
1.4 HOUSEHOLD INCOME.....	8
1.5 MINIMUM AGE	9
1.6 USUAL PLACE OF WORK, AVAILABILITY OF FREE PARKING, SCHOOL LOCATION	9
1.7 EMPLOYMENT OR STUDENT STATUS.....	9
1.8 TRANSIT PASS, OCCUPATION, NO WORK TRIP	9
1.9 BICYCLE AND WALK TRIPS	9
1.10 TRIP START TIMES	9
1.11 TRIP PURPOSE	10
1.12 TRAVEL METHOD	10
1.13 SAMPLING RATES AND SAMPLING PROCESSES	10
1.14 SAMPLE FRAME	11
1.15 SURVEY COMPLETION METHOD	12
1.16 INTERVIEW LANGUAGE	12
1.17 CHANGES IN SURVEY DATA WEIGHTING	13
1.18 ANALYSIS OF HOUSEHOLD LEVEL INFORMATION IN THE 2011 TTS DATA	13
1.19 COMPARABILITY OF DATA FROM DIFFERENT SURVEY CYCLES	13
SECTION 2 : DATA EXPANSION	15
SECTION 3 : PLANNING DISTRICTS.....	20
SECTION 4 : TRAFFIC ZONES	29
SECTION 5 : TTS DATABASES	31
5.1 HOUSEHOLD ATTRIBUTES	31
5.2 PERSON ATTRIBUTES	37
5.3 TRIP ATTRIBUTES	44
5.4 TRANSIT ATTRIBUTES.....	49
5.5 STATION CODES	53
5.6 TRANSIT OPERATOR CODES.....	55
5.7 TRANSIT ROUTE CODES	56
SECTION 6 : UNWEIGHTED AND WEIGHTED FREQUENCY COUNTS	74
6.1 HOUSEHOLD TABULATIONS	74
6.2 PERSON TABULATIONS.....	83
6.3 TRIP TABULATIONS	100
6.4 TRANSIT TRIP TABULATIONS.....	119
6.5 2016 EXPANDED MUNICIPAL TRANSIT TOTALS.....	134

Foreword

This report is designed to give potential users of the 1986, 1996, 2006, 2011, and 2016 Transportation Tomorrow Survey (TTS) data an understanding of the contents of the databases maintained at the Data Management Group. Users wishing to obtain information from the databases should contact the Data Management Group or one of the following agencies:

- Ministry of Transportation, Ontario
- City of Barrie
- City of Brantford
- City of Guelph
- City of Hamilton
- City of Kawartha Lakes
- City of Orillia
- City of Peterborough
- City of Toronto
- County of Brant
- County of Dufferin
- County of Peterborough
- County of Simcoe
- County of Wellington
- Metrolinx
- Regional Municipality of Durham
- Regional Municipality of Halton
- Regional Municipality of Niagara
- Regional Municipality of Peel
- Regional Municipality of Waterloo
- Regional Municipality of York
- Toronto Transit Commission
- Town of Orangeville

Users should be aware of the differences in both the content and the areas covered by the survey in each of the five years. This guide is a compilation of information from the original data guides for the 1986 (Version 3.1), 1996 (Version 2.1), 2006 (Version 1.0), and 2011 survey (Version 1.0) databases with comparable information for the 2016 survey (Version 1.0).

The TTS databases contain the following number of survey records:

Table 0-1: Number of records in the TTS databases

Tables	1986 (v3.1)	1996 (v2.1)	2006 (v1.0)	2011 (v1.0)	2016 (v1.0)
Household	61,453	115,193	149,631	159,157	162,708
Person	171,086	312,781	401,653	410,404	395,885
Non-transit trips	313,633	587,676	777,104	772,145	706,656
Transit trips	56,615	70,295	87,244	86,703	91,437

Further Information

The Transportation Tomorrow Survey (TTS) are parts of an ongoing data collection program by the Transportation Information Steering Committee (TISC). The survey data (2016, 2011, 2006, 2001, 1996, 1991 and 1986) are currently under the care of the Data Management Group. This group is responsible for maintaining the TTS databases and making available appropriate travel information for any urban transportation study in the area.

Requests for information from the TTS, or enquiries related to the contents of this report, should be directed to the address below.

SECTION 1: Differences Among TTS Survey Cycles (1986-2016)

Users of TTS data should be aware of the following differences when making comparisons between the 1986, 1991, 1996, 2001, 2006, 2011 and 2016 Transportation Tomorrow Surveys:

1.1 Survey Geography

The 1986 survey covered the Greater Toronto and Hamilton Area (GTHA) defined as the Municipality of Metropolitan Toronto plus the Regional Municipalities of Durham, York, Peel, Halton and Hamilton.

In 1991, the survey area was expanded to cover the municipalities adjacent to the GTHA boundary, referred to as the 'fringe area'. (The 1991 survey data is not included in this report.)

Extending well beyond the boundaries of either of the earlier surveys, the 1996 survey includes all of the GTHA plus Peterborough County (partial coverage), City of Peterborough, Victoria County (now City of Kawartha Lakes), Town of Orangeville, Simcoe County (partial coverage), City of Barrie, Wellington County (partial coverage), City of Guelph, Waterloo Region and Niagara Region. A small portion of Dufferin County adjacent to Orangeville was also included. Northumberland County was partially represented by interviews conducted during the training of interviewers.

In 2001, changes to the survey area relative to the 1996 TTS were the inclusion of the whole of Simcoe County, the addition of the City of Orillia, and the exclusion of the Regional Municipality of Waterloo and Northumberland County.

The 2006 survey area was expanded to include the Regional Municipality of Waterloo, City of Brantford and Dufferin County. Interviews were conducted in Brant County during the training of interviewers.

The survey area in the 2011 TTS was the same as in 2006 with the inclusion of Brant County.

The survey area in the 2016 TTS was the same as in 2011.

Within the study area, some municipal boundaries may have changed as municipalities have grown over the years. For example, certain cities have extended their city limits, while the counties they are located in have lost areas to these municipal expansions. There have also been amalgamations. Of note, in 1998, the regional municipality of Metropolitan Toronto and its constituent municipalities amalgamated as the City of Toronto. In the TTS data set, the current City of Toronto is organized into 16 planning districts. It may be noted that, for continuity with previous survey cycles, the City of Toronto's 'historic municipalities'—the former municipalities of East York, Etobicoke, North York, Scarborough, York, and Toronto—are still used for some reports on the TTS data. In 2001, the current City of Hamilton was amalgamated from the former municipalities of Hamilton, Flamborough, Dundas, Ancaster, Glanbrook, and Stoney Creek. These areas within the City of Hamilton are still used as planning districts in the TTS data set.

It may be noted the code list for municipalities/planning districts in Section 3 includes some codes that were only used in certain years.

Figure 1-1, following, illustrates the current bounds of the study area, as well as the TTS's evolution from its coverage of only the GTHA in 1986 to its coverage of the current study area since 2011.

Figure 1-1: Evolution of TTS Survey Area 1986 - 2016

1.2 Informed Consent

In 2016, in order to comply with privacy legislation, the survey phone interview scripts and online survey design were revised to ensure that explicit informed consent to collect respondent's survey information was asked for and recorded prior to completion of the survey. This in itself should not have any impact on the quality of the recorded data.

1.3 Dwelling Types

Since 1996, Townhouse was added as a dwelling unit type.

1.4 Household Income

In 2016, the household's total household income category was collected for the first time.

1.5 Minimum Age

In 1986, the minimum age of persons for which trip data was collected was 6. Starting from 1991, the minimum age was 11. Trip data for persons aged 6 through 10 should be excluded from the 1986 survey before making comparisons with the other surveys.

1.6 Usual Place Of Work, Availability Of Free Parking, School Location

Usual place of work, availability of free parking at work and school location were collected since 1991. Since 2001, school names have been recorded and represented by school codes in the final database.

1.7 Employment or Student Status

In 1986, student and employment status information were collected regardless of age but were recorded as a single attribute (i.e. either employed or a student, but not both). Since 1991, employment and student statuses were recorded as two separate attributes to allow for all combinations of full and part time status (except full time employed at the same time as full time student, which was not allowed in earlier cycles, but which was allowed starting in 2016).

Except for 1986, employment and student status information were not collected for persons under the age of 11. Persons aged from 6 to 10 are assumed to be full time students.

1.8 Transit Pass, Occupation, No Work Trip

Since 1996, possession of a transit pass, occupation description and confirmation if a full-time employed person who did not make a work trip worked from home on the trip day were collected.

In 2016, Presto was added as a transit pass type, while GO Transit Pass (which had been a response option in 2011 and prior) was removed.

1.9 Bicycle and Walk Trips

In 1986, information on bicycle trips was only collected for trips to or from school or work. Starting from 1991, information was collected for all bicycle trips. In all survey years walk trips are only collected for trips to and from work or school or when the walk trip is a connecting trip within a chain of trips that use other non-walk modes.

1.10 Trip Start Times

In 1986, trip start times were not recorded for some school trips made by persons under the age of 14. Starting from 1991, trip start time was recorded for all trips. This difference must be allowed for in making comparisons of trip start time distributions, particularly for walk, cycle, school bus and, to a lesser extent, transit trips.

1.11 Trip Purpose

In 1986, shopping, entertainment and personal business trips were recorded as three separate trip purposes. In 1991, these trip purposes were combined under the 'other' category. From 1996 onwards, shopping was again distinguished as a separate trip purpose.

Since 1991, daycare was recorded as a separate trip purpose. In 1986, trips to daycare would most likely have been included in the 'facilitate passenger' category.

1.12 Travel method

In 2016, paid rideshare (e.g., Uber, Lyft, DriveHer) was added as a travel method.

1.13 Sampling Rates and Sampling Processes

The sampling rate is the percentage of households in the survey geography that have been surveyed. The sampling rates have varied by cycle as follows:

- 1986 Random sample of households throughout the survey area at a uniform 4.2% sampling rate.
- 1991 Different sampling rates for high and low growth areas (5.0% in high growth and 0.5% in low growth areas. There was significantly more variance due to random sampling in the 1991 data than for 1986 and 1996, particularly for areas sampled predominantly at the 0.5% rate such as City of Toronto.
- 1996 Random sample of households throughout the survey area at a uniform 5.0% sampling rate.
- 2001 The sample selection and sample control process were based on Forward Sortation Areas (FSAs) i.e. the 1st three characters of the postal code. Some FSAs were sampled at a higher rate than others were, and within most FSAs, apartment buildings are known to be under-represented relative to other types of housing. Overall, the sample represented 5.7% of all households.
- 2006 Sampling was originally based on a random selection of households throughout the survey area. Analysis of phase 1 interview statistics showed the response rate was 16% higher for single units. In order to compensate for the low response rate for multi units (i.e. apartments), a higher sample rate was used in the later interview phases. Overall, the sample represented 5.2% of all households.
- 2011 The sample selection and sample control process were based on FSAs with a higher sample rate for multi units. This survey obtained an overall 5.1% sampling rate across the study area.
- 2016 The sample selection and sample control process for the 2016 survey cycle was based on FSA, further stratified by dwelling type (house or multi unit) and sample type (address-only, and address-and-phone). Targets were set to achieve an overall sampling rate of 5.0% in all regions except Hamilton, which had a 3.0% sampling rate target.

For more information on sample selection, please refer to "2016 Transportation Tomorrow Survey: Design and Conduct of the Survey".

1.14 Sample Frame

The sample universe (the target population the survey is intended to represent) for all cycles has been private households occupied by usual residents.

From 1986 to 2011, the sample frame was based on telephone subscriber lists. Listings with addresses were randomly sampled and sent survey notification letters, followed by telephone calls to complete survey interviews over the phone. Up to 2001, the telephone subscriber lists provided excellent coverage of almost all private households, with very few household not having a land line telephone. By 2006, cell-phone-only households were beginning to emerge, and the proportion of all households with a traditional land line telephone having reduced somewhat to about 93%, which may have had only a modest impact on the representativeness of a sample drawn from listed land lines (with younger households in particular being less likely to have landlines). For the 2011 survey cycle, conducted in the fall of 2011 and the fall of 2012, cell-phone-only households were more common, with the proportion of households with traditional land lines being less than 71%, and the proportion of younger households with land lines having diminished considerably further. The exclusion of cell-phone-only households from the sampling frame had a more pronounced impact on the representativeness of the expanded survey data, particularly in areas with higher concentrations or younger households and smaller households (e.g., downtown Toronto).¹

In 2016, in order to include cell-phone-only households in the survey invitations, the survey sample was drawn from a database of mailable addresses, which was matched, where possible, to telephone numbers listed in the telephone subscriber directory. Addresses not matched to a telephone number received a survey letter inviting them to participate online or via phone while addresses matched to a telephone number received both a letter and telephone calls. When the address listings were randomly sampled from across the study area, appropriate volumes of address-only and address-and-phone listings were drawn to take into account the higher response rates for address-and-phone samples, and ensure that the final completed survey sample would have an appropriate balance of address-only and address-and-phone households. This core sample was supplemented by the testing of a small 'phone-only' sample, composed of equal parts Random Digit Dialed (RDD) phone numbers, listed phone numbers without an address in their listing, and cell phones. After an initial trial, the phone only sample was abandoned, and thus only accounts for a small proportion of the total sample.

Table 1-1: 2016 TTS - Type of Sample List

Sample Type	Surveys	% of Total
Address+Phone	82,460	50.7%
Address-Only	79,226	48.7%
Phone-Only/Other*	1,022	0.6%

* Other (n=66) includes a very small number of households that had not been randomly sampled that were allowed to participate, as well as a small number of survey completions for households who were invited but were not matched to their sample record when calling in to complete the interview over the phone.

¹ By 2013, fully 60% of households with all occupants under the age of 35 were cell-phone-only households. Figures on incidence of land line telephone subscriptions and cell-phone-only households cited in the above paragraph are from Statistics Canada's *Residential Telephone Service Survey (RTSS)*, 2005, 2008, 2010, and 2013 data releases.

1.15 Survey Completion Method

From 1986 to 2006, all surveys were completed via telephone interview. In 2011, online surveying was introduced, with 12% of respondents completing the survey online, and 88% by phone. In 2016, 64% of all survey completions were completed online, while 36% were completed over the telephone. The increase in online surveying can be attributed in part to the sample composition, with the address-only portion of the sample receiving only a survey letter and no phone contact, and in part to the public's increasing comfort in completing online surveys.

Table 1-2: 2016 TTS - Survey Completion Method

Survey Completion Method	Surveys	% of Total
Phone	57,847	36%
Online*	104,861	64%

* Online includes a small number of respondents who started online and completed via a telephone interview conducted using the online platform.

1.16 Interview Language

The language in which interviews were conducted was recorded but is not included in the final database since it was not considered to be a meaningful piece of information with respect to either household demographics or travel behaviour. Table 1-3 provides a summary of the number of interviews conducted by different languages in the 1986, 1996, 2001, 2006, 2011, and 2016 surveys. It may be noted that in 2016, 64% of survey completions were via the online survey, which was offered in English and French only.

Table 1-3: Interview languages used in the TTS survey

Language	1986		1996		2006		2011		2016	
	Interviews	%	Interviews	%	Interviews	%	Interviews	%	Interviews	%
Cantonese	107	0.2%	1,418	1.2%	1,703	1.1%	1,115	0.7%	39	0.0%
English	60,791	98.9%	112,808	97.9%	143,169	95.7%	154,420	97.0%	161,542	99.3%
French	60	0.1%	25	0.0%	85	0.1%	78	0.0%	221*	0.1%
Greek					167	0.1%	234	0.1%	1	0.0%
Hindi							21	0.0%		0.0%
Italian	243	0.4%	549	0.5%	892	0.6%	700	0.4%	172	0.1%
Mandarin					678	0.5%	498	0.3%	65	0.0%
Portuguese	107	0.2%	340	0.3%	515	0.3%	484	0.3%	130	0.1%
Russian							65	0.0%	84	0.1%
Spanish					224	0.1%	250	0.2%	77	0.0%
Other	145	0.2%	53%	0.1%	2,198	1.5%	1,292	0.8%	377	0.2%

* French surveys in 2016 include completions both online and via the telephone.

1.17 Changes in Survey Data Weighting

From 1986 through 2006, the survey sample collected was weighted with simple expansion factors that expanded the households surveyed to match the Census household counts by geography. In 2006, the weighting controls were conducted with aggregations of Census tracts.

In 2011, a new approach to data weighting was taken that expanded the data to represent total population rather than total households. Adjustments were first made to expand the number of households to represent total apartments and non-apartments in the geographies of the study area. This was followed by adjustments such that the expanded person-level survey data represented the Census distributions of the total population by age group (with each household receiving a household weight based on the mean of the person weights for persons in the household). The Census counts of total population by age group include people living in collective dwellings.² Therefore, the survey results for the 2011 cycle slightly over-represent the survey's target population of people living in private dwellings (by 1.4%) and thus may also slightly over-represent the number of trips made. As the final adjustment was to population counts, the weighted household counts in 2011 deviated somewhat from the total private households in each study area per the Census.

In 2016, a more complex approach to data weighting was taken that expanded the data to match total households once again. An iterative proportional fitting method was undertaken to adjust the household weights according to the following controls: dwelling type, household size, and householder age by gender. As the method employed made household-level adjustments based on the age/gender demographics of all householders, the 2016 expanded household counts in the survey data match the Census household counts. The weighted 2016 survey data closely match Census household size and dwelling type distributions, whereas previous surveys may have had more variance from Census household size and dwelling type distributions.

See Section 2 of this report for further discussion of the data weighting.

1.18 Analysis of Household Level Information in the 2011 TTS Data

As noted above, the 2011 TTS was unique in that the survey weighting was applied at the person-level, with the household weight subsequently assigned as the mean of the person weights for all householders each household. Therefore, the expanded value of household attributes which count the number of householders with certain attributes might not match the expanded value based on person attributes from the person tables. For any 2011 tabulations, these household attributes should only be used as filter variables. The 2011 TTS household attributes with this issue include the following: the number of people in the household, the number of people with drivers licenses in the household, the number of workers (full-time, part-time, and work-from-home) in the household, and the number of students in the household.

This issue does not apply to the 2016 data, nor to earlier survey cycles from 1986 through 2006.

1.19 Comparability of Data from Different Survey Cycles

Caution should be undertaken when comparing data between survey cycles. The comparability of the datasets for individual cycles may be affected by a number of factors including: how well the target population (residents of private households) is represented by the sample source used in the given cycle;

² In 2011, 1.4% of the population in the study area did not live in private dwellings. In 2016, the proportion was similar, at 1.3%.

changes in survey methods; and how the survey sample was weighted and expanded to represent the total population.

As noted in the preceding sections of this report, from 1986 through 2001, the sample source of listed land-line telephone subscribers provided excellent coverage of all private residences in the survey area, the survey methods were the same, and it was possible to weight the data with simple expansion factors such that the weighted data matched household counts. The 2006 TTS was the first survey cycle affected by changes in household telephone subscription habits. The 2011 and 2016 survey cycles had a number of differences from previous cycles in terms of the coverage of population universe by the sample frame, survey methods, response rates, and data weighting methods. In particular, the 2011 TTS had no coverage of cell-phone only households. If the residents of cell-phone-only households had different demographics and travel behaviours than those in households with traditional land lines, this may have had an impact on the representativeness of the 2011 survey sample. As also noted earlier, the 2011 TTS also over-represents the total number of people living in private households by 1.4%. In the 2016 survey cycle, address-only sample was achieved to achieve coverage of cell-phone-only households, however this portion of the cycle has lower response rates and likely higher non-response bias than for phone samples with high response rates, which may have an impact on the representativeness of the survey sample.

Readers may note that the 2016 survey obtained 2.3% more survey completions than were obtained in 2011, but gathered 3.5% fewer person records (see Table 0-1 on page 5 of this report). This may be due, in part, to the ongoing trend of diminishing household sizes and, in part, to more representative coverage of one-person households in the 2016 survey. (The 2011 survey under-represented one-person households and over-represented two- and three-person households.) Whatever the reasons, there appear to be some differences in the composition of the 2011 and 2016 survey samples prior to the application of data weighting. The application of data weights should ideally improve the representativeness of the weighted sample. However, if travel patterns differ for people in households with characteristics subject to non-response bias and those characteristics not controlled for in the data weighting for certain surveys cycle (such as household size in the 2011 TTS and prior), this may have an impact on the survey estimates and the comparability of results with different sample compositions and/or different weighting approaches.

It is unclear whether the 2016 survey data is a more or less 'accurate' representation of the travel behaviours of residents of private households compared to the 2011 or other cycles. The lower total daily trip estimates in 2016 compared to 2011 do not necessarily indicate a reduction in total trips in actuality. Further research to explore the impacts of changing sample frames, survey methods, and data weighting on the survey results is recommended. For the above reasons, caution should be undertaken when comparing the results from the 2006, 2011, and 2016 survey cycles.

SECTION 2: Data Expansion

The data for each survey have been expanded to represent the total households or total population of the survey area in each survey cycle.

In the 1986, 1991, 1996, 2001, and 2006 surveys, survey expansion factors were calculated based on geographic areas called expansion zones. In 2001, these were based on postal forward sortation areas (FSAs), while in 2006, these were based on aggregated Census Tracts. The number of households (private dwelling units occupied by usual residents) in each expansion zone was obtained from the Canada Census and used as the control total for calculating the expansion factor. The same expansion factor was applied to all the households in an expansion zone and to all household, person, and trip data associated with each household.

In the 2011 survey, the weighting method took into account adjustments for age distribution, and the final expansion was to match Canada Census population counts rather than household counts. Postal FSAs were used as the geographical basis for expansion zones to expand to the Census counts, except in more rural areas, for which the first five digits of postal codes were used to expand to Canada Post delivery counts. To adjust for observed bias in the 2011 dataset by age, adjustment factors were then applied using Census counts aggregated by age range. This step also had the effect of adjusting the weighted survey counts to match total population (rather than to total households as in previous cycles). As 1.3% of the population lived in collective dwellings (prisons, student residences, seniors care facilities) or was homeless, and thus not part of the TTS's target sample frame, the 2011 cycle slightly over-represents the target population of people living in private residences. In the 2011 data, the person-level expansion factors were applied to the person and trip data, while the household expansion factor included in the database is the mean of the person factors applied to each person in a given household. For the 2011 data, household tabulations will only be consistent with person and trip tabulations if they are based on complete household data. The use of the household expansion factors for tabulation of household data based on any subset of household members (e.g. number of persons with a driver's licence) is not valid. These attributes should only be used as filters when performing person or trip tabulations.

In the 2016 survey, the weighting method took into account adjustments for dwelling type, household size, and the distribution of the population by age and gender, with the data expanded to match Canada Census counts of households. Aggregations of Statistics Canada Aggregated Dissemination Areas (ADAs) were used as the geographical basis for expansion zones.³ In order for the geographical expansion zones to align better with municipal and planning district boundaries, a small number of ADA's were split by Census Subdivision (in cases where a rural ADA included multiple Census Subdivisions), Census Tract, and/or Dissemination Area. In order to address the challenge of making weighting adjustments for both household-level and person-level controls, an iterative proportional fitting method was used. First, adjustments to the household weights were made to match dwelling type distributions within each expansion zone, followed by adjustments to match household size distributions. After this, the population distributions by age and gender were compared to Census counts within each expansion zone (with some discounting of persons over the age of 75 years to account for seniors living in collective dwellings), with each household factor receiving an adjustment factor computed as the average of the theoretical person-level adjustments for people within the household. This entire process was repeated until the weights converged on a solution that generally satisfied both the

³ ADAs were created for the 2016 Census, covering the entire country to ensure the availability of census data across all regions of Canada. They are formed from Census Tracts within Census Metropolitan Areas and tracted Census Agglomerations, Census Subdivisions or Dissemination Areas, and generally contain a population between 5,000 and 15,000.

household- and person-level controls from the Census. During this iterative process, an adjustment was made to better control the number of GO Train users to better match GO Train ridership, but the other household controls were allowed to take precedence over this adjustment. Final calibrations to the weights were made such that the survey data matched the Census control counts of private dwellings occupied by usual residents. The resulting household weight was then applied to all person and trip data associated with the given household. It may be noted that the weighted 2016 survey data closely match Census household size and dwelling type distributions, whereas previous surveys may have had more variance from Census household size and dwelling type distributions.

Details of the expansion process and the expansion factors used in the previous surveys are contained in the individual data guides and expansion reports for those years. Details of the 2016 data expansion are contained in the report “2016 TTS: Data Expansion and Validation”.

The following table provides a summary by planning district and compares the expanded totals from the survey, both for dwelling units and for population, with data from the 2016 Census. Since expansion adjustment was made at household level, there were no significant differences in households.

The reported difference in total households is 0.0%, which stands to reason given that the data weighting was calibrated to counts of private dwellings. Slight deviations from household counts in some of the smaller planning districts may be attributed to limits to the size of weighting factors that were applied in the weighting process and/or very occasional expansion zones with tiny populations lacking any survey samples.

The reported difference in total population between the 2016 survey and the census at -2.1% compares with the differences of 2.8%, 2.8%, 2.8%, and 0.1% in the 1986, 1996, 2006, and 2011 surveys respectively. Readers are reminded that the total population counts from the Census includes the 1.3% of the population living in collective dwellings (prisons, army barracks, group senior’s care facilities, on-campus student residences) and the estimates of the homeless, whereas the target population for the TTS is population living in private residences, or 98.7% of the total population. The weighted 2016 survey data represents slight less than this, at 97.9% of the total population. The reason for this, despite the adjustments for household size category in the data weighting, may be attributed to non-response bias amongst larger households (e.g. those with more than six persons) and/or limits to the size of weighting factors that were applied in the weighting process.

The overall 5.0% sampling rate target was obtained for the survey area outside Hamilton. The 3.0% sampling rate target for Hamilton was met. By region and planning district there may be some variation above or below this sampling rate. It may be noted that the survey targets by region and municipality / planning district were initially set based on 2016 forecasts based on growth trends for Census population counts up to and including 2011. Actual 2016 household counts in the Canada Census often varied from these forecasts.

SECTION 3: Planning Districts

The 46 planning district system for the GTHA has been extended to include survey areas external to the GTHA. The numberings were assigned starting at 51 for Grimsby in Niagara Region and ending at 147 for the City of Brantford.

Table 3-1: Regions and planning districts

SECTION 4: Traffic Zones

The following table illustrates the correspondence between the revised TTS traffic zone numbering and the internal zone numbering system used by each agency. The 2016 survey data are coded to the 2006 traffic zone system, which has been updated with occasional minor adjustments to zone boundaries.

Table 4-1: Survey areas zone numbering

Agency	2001 Traffic Zone System	2006 Traffic Zone System
Not Applicable	0	0
Toronto	1 – 481	1 – 625
Durham	501 – 765	1001 – 1334

Peterborough County	3871 – 3875	8851 – 8855
City of Peterborough	3901 – 3925	8801 – 8825
Northumberland (1996 only)	3931 – 3946	9001 – 9016
External	3947 – 3998	9017 – 9068
External Undefined	4000	9998
No Usual Location	8888	8888
Unknown	9999	9999

General Codes

‘0’ and ‘8888’ are used where a traffic zone specification is not applicable. Individuals who are not employed or are not students are assigned a zone code of ‘0’ in the applicable zone field. Individuals who have no usual place of work or school are assigned the code of ‘8888’ in the zone field.

‘9998’ identifies points that are external to the zone system. It may be noted that the traffic zone coding system extends beyond the 2016 TTS study area to include some municipalities in nearby areas (zones 9017-9068), which are detailed in the next table.

‘9999’ identifies points that are unknown.

Table 4-2: External areas zone numbering

SECTION 5: TTS Databases

5.1 Household attributes

The following data were collected or calculated from the TTS for each household that was surveyed in 2016. The attributes and categories are the same for all surveys unless noted otherwise.

Yellow-highlighted rows in the table below are not included in the final Data Guide. These attributes are maintained in the database but not available to public.

Table 5-1: Household Attributes

Household Attributes		
Attribute	Description	Code
hhld_num	Household sample number	A six digit unique identifier
region_hhld	Regional municipality of household	1 - Toronto 2 - Durham 3 - York 4 - Peel 5 - Halton 6 - Hamilton 11 - Niagara (starting from 1996) 12 - Waterloo (1996, 2006, 2011, 2016) 13 - Guelph (starting from 1996) 14 - Wellington (starting from 1996) 15 - Orangeville (starting from 1996) 16 - Barrie (starting from 1996) 17 - Simcoe (starting from 1996) 18 - Kawartha Lakes (starting from 1996) 19 - City of Peterborough (starting from 1996) 20 - Peterborough County (starting from 1996) 21 - Orillia (starting in 2001) 22 - Dufferin (starting from 2006) 23 - Brantford (starting from 2006) 24 - Brant (starting from 2006) 98 - External (Northumberland - 1996 only)
pd_hhld	Planning district or local municipality of household	See SECTION 3
gta01_hhld	2001 traffic zone of the household	2001 Traffic Zone (See SECTION 4)
gta06_hhld	2006 traffic zone of the household	2006 Traffic Zone (See SECTION 4)
ct_uid	Census Tract (CT) of household	Statistics Canada standard geographical classifications
csd_hhld	Census Subdivision (CSD) of household	Statistics Canada standard geographical classifications

Household Attributes

Attribute	Description	Code
ward_hhld	TTS Ward System	Municipal electoral ward boundaries. Obtain definitions from the Data Management Group.
base_geotype	Type of geographical classification for geographical unit in base for weighting aggregations	CSD - Census Subdivision ADA - Aggregated Dissemination Area CT - Census Tract DA - Dissemination Area
base_geoid	Geographic identifier for base geographical unit	Statistics Canada standard geographical classifications
wdist_geoid	Geographical weighting unit (aggregation of base geographical units)	1001 – 147007 (First 1 to 3 digits are the Planning District Code, last three digits are the weighting unit number within the Planning District.)
gtyp_hhld	Method used to geocode household	A - Address Range or Full Address AD - Address Range (unknown/ambiguous civic number) D - Parcel Dot (1996 & 2001 only) DD - Drag and Drop (Google Map) DC - Double Click (Google Map) E - Emergency Location Code (1996 only) G-M - Place of Interest (Google) G-SA - Street Address (Google) G-PC - Postal Code (Google) G-U - Google Accuracy Unclear I - Intersection M - Monument N - Neighbourhood P - Place Name Z - Traffic Zone (prior to 2006) SN - Street Name
utm_x_hhld	UTM X coordinate of the household	Distance east in metres, measured from the 81 st degree longitude with a false easting of 500,000 metres
utm_y_hhld	UTM Y coordinate of the household	Distance north in metres, measured from the equator
dwel_type	Type of dwelling unit	1 - House 2 - Apartment 3 - Townhouse (starting from 1996) 9 - Unknown
rec_mail	Receipt of advance letter (not in 1986)	Y - Yes N - No 9 - Unknown

Household Attributes

Attribute	Description	Code																														
n_call	For surveys completed by telephone: Number of calls or edit attempts to complete the interview. For surveys completed in the online system in 2016: Number of call-backs attempts to follow up on data issues	Integer																														
trip_week	Weeks into the survey when trip data was collected Refer to individual data guides for week numbering in previous surveys	Week of survey beginning on date listed below. Dates of survey week start fall on Mondays unless otherwise specified. <table><tr><td>1</td><td>September 6, 2016 (Tuesday)</td></tr><tr><td>2</td><td>September 12, 2016</td></tr><tr><td>3</td><td>September 19, 2016</td></tr><tr><td>4</td><td>September 26, 2016</td></tr><tr><td>5</td><td>October 3, 2016</td></tr><tr><td>6</td><td>October 11, 2016 (Tuesday)</td></tr><tr><td>7</td><td>October 17, 2016</td></tr><tr><td>8</td><td>October 24, 2016</td></tr><tr><td>9</td><td>October 31, 2016</td></tr><tr><td>10</td><td>November 7, 2016</td></tr><tr><td>11</td><td>November 14, 2016</td></tr><tr><td>12</td><td>November 21, 2016</td></tr><tr><td>13</td><td>November 28, 2016</td></tr><tr><td>14</td><td>December 5, 2016</td></tr><tr><td>15</td><td>December 12, 2016</td></tr></table>	1	September 6, 2016 (Tuesday)	2	September 12, 2016	3	September 19, 2016	4	September 26, 2016	5	October 3, 2016	6	October 11, 2016 (Tuesday)	7	October 17, 2016	8	October 24, 2016	9	October 31, 2016	10	November 7, 2016	11	November 14, 2016	12	November 21, 2016	13	November 28, 2016	14	December 5, 2016	15	December 12, 2016

15	December 12, 2016																															
trip_day	Day of week trip data was collected for	1 - Monday 2 - Tuesday 3 - Wednesday 4 - Thursday 5 - Friday 9 - Unknown (1986, 1991)																														
n_person	Number of persons in the household 2011 TTS only: The expanded value of this attribute might not match the expanded value based on person attributes. This attribute should only be used as a filter for 2011 tabulations. See Section 1.18 in this report for more detail.	1 - 10 (1986 only) 1 - 98 99 – Unknown																														
n_vehicle	Number of vehicles available for personal use in the household	0 – 98 99 – Unknown																														

Household Attributes

Attribute	Description	Code
n_licence	Number of persons possessing a driver's licence in the household 2011 TTS only: The expanded value of this attribute might not match the expanded value based on person attributes. This attribute should only be used as a filter for 2011 tabulations. See Section 1.18 in this report for more detail.	0 – 98 99 – Unknown
n_emp_ft	Number of full time workers in the household Starting from 1996: it includes full time work at home persons. Prior to 1996: it does not include any work at home persons. 2011 TTS only: The expanded value of this attribute might not match the expanded value based on person attributes. This attribute should only be used as a filter for 2011 tabulations. See Section 1.18 in this report for more detail.	0 – 98 99 – Unknown
n_emp_pt	Number of part time workers in the household Starting from 1996: it includes part time work at home persons. Prior to 1996: it does not include any work at home persons. 2011 TTS only: The expanded value of this attribute might not match the expanded value based on person attributes. This attribute should only be used as a filter for 2011 tabulations. See Section 1.18 in this report for more detail.	0 – 98 99 – Unknown

Household Attributes

Attribute	Description	Code
n_emp_home	Number of persons who work full or part time at home in the household 2011 TTS only: The expanded value of this attribute might not match the expanded value based on person attributes. This attribute should only be used as a filter for 2011 tabulations. See Section 1.18 in this report for more detail.	0 – 98 99 – Unknown
n_student	Number of full or part time students in the household 2011: households were expanded using the mean expansion factors of the persons in the household. Therefore the expanded value of this attribute might not match the expanded value based on person attributes. This attribute should only be used as a filter for 2011 tabulations. This issue does not apply to the 2016 data, for which each person in the household has the same expansion factor.	0 – 98 99 – Unknown
n_hhld_trip	Number of household trips on trip day 1986 data includes persons aged 6-10. All other cycles include persons 11+ years of age.	0 – 98 99 – Unknown
hhld_expf	Expansion factor for the household. In 2011, this was the mean of the factors applied to the persons in the same household. See Section 1.18 in this report. In 2016, and in surveys earlier than 2011, each person in the same household carries the same expansion factor.	A five digit number, to two-decimal places

Household Attributes

Attribute	Description	Code
income	Household's total income last year from all sources before income tax New in 2016. The question was voluntary and subject to high levels of non-response (19% of respondents, or 18% of weighted respondents refused to answer). The results of this question should be interpreted with caution.	1 - \$0 to \$14,999 2 - \$15,000 to \$39,999 3 - \$40,000 to \$59,999 4 - \$60,000 to \$99,999 5 - \$100,000 to \$124,999 6 - \$125,000 and above 7 - Decline / don't know
sampletype	Type of sample from the hybrid sampling plan	1 - Address+Phone 2 - Address-Only 3 - Phone-Only 7 – Volunteer/other (survey case was created when respondent called in and asked to be included)
surveymethod	Whether completed by telephone or online. A portion of those completed online were completed over the phone.	1 – Telephone 2 – Online
surveymode	Survey mode at start of survey vs survey mode at end of survey.	1 - Start online end online 2 - Start by phone end by phone 3 - Start online end by phone 4 - Start by phone end online
language	Language survey was conducted in	C Cantonese E English F French G Greek I Italian M Mandarin O Other P Portuguese R Russian S Spanish

5.2 Person attributes

The following data were collected or calculated for each person in the households surveyed in 2016. The attributes and categories are the same for all surveys except as noted. Certain information was not collected for all householders (e.g., information on the school attended was not collected for householders aged 6 through 10).

Person Attributes

Attribute	Description	Code
hhld_num	Household sample number	A six digit unique identifier
pers_num	Person number within the household	1 - 9
respond	Respondent status (household member who provided information)	T - Respondent F - Not a respondent (i.e. information was reported by another member of the household)
age	Age of person in years	0 - 99 97 - Aged 97 and older (1986) 98 - Aged 98 and older (starting from 1991) 99 - Unknown (In 1991 age 1 included all persons under 2 years of age)
sex	Gender of the person	F - Female M - Male 9 - Unknown
driver_lic	Possession of a driver's licence	Y - Yes N - No 9 - Unknown
tran_pass	Possession of a transit pass (starting from 1996)	C - Combination or Dual Pass G - GO Transit Pass (until 2011) M - Metro Pass N - None O - Other Agency Pass P - Presto (from 2016) 9 - Unknown (Persons under age 11 are assumed not to have a transit pass)

Person Attributes

Attribute	Description	Code
emp_stat	Employment status of the person In 1986 a person could be recorded as employed or a student but not both Since 1991, combinations of employment and student status were allowed	F - Full time H - Work at home full time J - Work at home part time O - Not employed P - Part time 9 - Unknown (Persons under 11 are assumed not to be employed)
occupation	Person's occupation type (starting in 1996)	G - General Office / Clerical M - Manufacturing / Construction / Trades P - Professional / Management / Technical S - Retail Sales and Service O - Not Employed 9 - Unknown
no_work	Whether a full time employed person who does not usually work from home and who did not make a work trip on the trip day worked from home. (starting in 1996)	N - No Y - Yes O - Not Applicable 9 - Unknown
stu_stat	Student status of person In 1986 a person could be recorded as employed or a student but not both. Starting from 1991, combination of employment and student status was allowed	O - Not a student P - Part time student S - Full time student 9 - Unknown (Persons between 6 and 10 are assumed to be full time students; Persons between 0 and 5 are coded as 'not a student')
sch_code	School codes (Starting from 2001)	0000 - Not a student or between 6 and 10 years of age (therefore no school recorded) ZZZZ – Student but not attend school outside the home (home schooled or distance education) (Please contact Data Management Group for detailed listing of schools)

Person Attributes

Attribute	Description	Code
region_emp	Regional/Local municipality of person's usual place of work (not in 1986)	0 - Not employed 1 - Toronto 2 - Durham 3 - York 4 - Peel 5 - Halton 6 - Hamilton 11 - Niagara 12 - Waterloo 13 - Guelph 14 - Wellington 15 - Orangeville 16 - Barrie 17 - Simcoe 18 - Kawartha Lakes 19 - City of Peterborough 20 - Peterborough County 21 - Orillia 22 - Dufferin 23 - Brantford 24 - Brant 88 - No usual place of work 98 - External 99 - Unknown
pd_emp	Planning district of person's usual place of work (not in 1986)	See SECTION 3
gta01_emp	2001 traffic zone of person's usual place of work (not in 1986)	2001 Traffic Zone (See SECTION 4)
gta06_emp	2006 traffic zone of person's usual place of work (not in 1986)	2006 Traffic Zone (See SECTION 4)
ct_emp	Census Tract (CT) of person's usual place of work	Statistics Canada standard geographical classifications
csd_emp	Census Subdivision (CSD) of person's usual place of work	Statistics Canada standard geographical classifications
ward_emp	TTS Ward System	Obtain definitions from the Data Management Group
base_emp	Geographic identifier for base geographical unit	Statistics Canada standard geographical classifications

Person Attributes

Attribute	Description	Code
wdist_emp	Geographical weighting unit (aggregation of base geographical units)	1001-147007 (First 1 to 3 digits are the Planning District Code, last three digits are the weighting unit number within the Planning District.)
utm_x_emp	UTM X coordinate of person's usual place of work (not in 1986)	Distance east in metres 0 - Not Employed 888888 - No usual place of work 999998 - External 999999 - Unknown
utm_y_emp	UTM Y coordinate of person's usual place of work (not in 1986)	Distance north in metres 0 - Not Employed 888888 - No usual place of work 999998 - External 999999 - Unknown
gtyp_emp	Method used to geocode person's usual place of work (not in 1986)	A - Address Range or Full Address AD - Address Range (unknown/ambiguous civic number) B - Blank (Not employed) D - Parcel Dot (1996 & 2001 only) DC - Double Click DD - Drag and Drop E - Emergency Location Code (1996 only) F - MapInfo (1996 only) FSA - FSA G-I - Intersection (Google) G-L - Locality (Google) G-M - Place of Interest (Google) G-N - Neighborhood (Google) G-PC - Postal Code (Google) G-SA - Street Address (Google) G-SN - Route/Street Name (Google) G-T - Transit Station G-U - Unclear Google Accuracy I - Intersection M - Monument N - No Usual Place Of Work OSA - Outside Study Area P - Landmark R - Location Unknown / Uncodable S - School SN - Street Name Z - Traffic Zone (1996 & 2001 only)

Person Attributes

Attribute	Description	Code
free_park	Availability of free parking at person's usual place of work (not in 1986)	N - No O - Not applicable Y - Yes 9 - Unknown Note: For online survey completions in 2016, not asked for people who work from home.
region_sch	Regional municipality of person's usual place of school (not in 1986)	Same as region_emp 0 - Not a student (or 6-10 years of age and school not captured) 88 - No usual place of school 98 - External 99 - Unknown
pd_sch	Planning district of person's usual place of school (not in 1986)	See SECTION 3
gta01_sch	2001 traffic zone of person's usual place of school (not in 1986)	2001 Traffic Zone (See SECTION 4)
gta06_sch	2006 traffic zone of person's usual place of school (not in 1986)	2006 Traffic Zone (See SECTION 4)
ct_sch	Census Tract (CT) of school	Statistics Canada standard geographical classifications
csd_sch	Census Subdivision (CSD) of school	Statistics Canada standard geographical classifications
ward_sch	TTS Ward System	Obtain definitions from the Data Management Group
base_sch	Geographic identifier for base geographical unit	Statistics Canada standard geographical classifications
wdist_sch	Geographical weighting unit (aggregation of base geographical units)	1001-147007 (First 1 to 3 digits are the Planning District Code, last three digits are the weighting unit number within the Planning District)
utm_x_sch	UTM X coordinate of person's usual place of school (not in 1986)	Distance east in metres 0 - Not a student 888888 - No usual place of school 999999 - Unknown
utm_y_sch	UTM Y coordinate of person's usual place of school (not in 1986)	Distance north in metres 0 - Not a student 8888888 - No usual place of school 9999999 - Unknown

Person Attributes

Attribute	Description	Code
gtyp_sch	Method used to geocode person's usual place of school (not in 1986)	A - Address Range (1996) or Full Address (2015) B - Blank (not a student or 6-10 years so school not asked) D - Parcel Dot (1996 only) DC - Double Click DD - Drag and Drop E - Emergency location code (1996 only) F - MapInfo (1996 only) G-L - Locality (Google) G-M - Place of Interest (Google) G-SA - Street Address (Google) G-U - Unclear Google Accuracy I - Intersection (1996, 2015) P - Landmark / Place Name (1996, 2015) R - Location Unknown / Uncodable S - School Z - Traffic Zone (1996 only)
n_pers_trip	Number of trips made by the individual on trip day (1986 data includes persons aged 6-10)	0 – 98 99 – Unknown
n_tran_trip	Number of trips made by individual on trip day with primary mode being public transit (1986 data includes persons aged 6-10)	0 – 98 99 – Unknown
pers_expf	Expansion factor for the person (only in 2011)	A five digit number
age_orig	Original response in age field prior to any imputation of ages.	0-97 98 – 98 or more years 99 – unknown / declined 999 – declined specific age, asked age range (online surveys in 2016 only)
age-range	Age range given when specific age refused (online surveys only in 2016)	1 0-4 years 2 5-10 years 3 11-15 years 4 16-19 years 5 20-24 years 6 25-29 years 7 30-34 years 8 35-39 years 9 40-44 years 10 45-49 years

Person Attributes

Attribute	Description	Code
		11 50-54 years
		12 55-59 years
		13 60-64 years
		14 65-69 years
		15 70-74 years
		16 75-79 years
		17 80-84 years
		18 85-89 years
		19 90-94 years
		20 95 years+
		21 98 years+
		999 Decline / Don't know
age_imputed	Age imputed within given age range	0-98
sex_orig	Original response in sex field prior to random assignment of unknowns to male or female	F -Female M -Male 9 -Unknown/declined
sex_imputed	Imputed sex	F -Female M -Male

5.3 Trip attributes

The following data were collected or calculated for each trip made on the trip day for each person 11 years old and older in the households surveyed in 2016. The attributes and categories are the same for all surveys except as noted. Trip information was collected for household members 6 years old and over in 1986, and 11 and older since 1991. Trips are collected for all trips made by motorized means, but only for walking trips that were either to or from work or school or if they connected other eligible trips (in other words, a 'round trip' journey made entirely via walking would not be captured as a trip in this survey).

Table 5-2: Trip attributes

Trip Attributes

Attribute	Description	Code
hhld_num	Household sample number	A six digit unique identifier
pers_num	Person number within the household	1 - 9
trip_num	Trip number for that person	1 - 99
start_time	Start time of the trip (24 hour clock)	400 - 2800 (4 a.m. on the trip day to 4 a.m. the next day) 9999 - Unknown
mode_prime	Primary mode of the trip (if any part of the trip is made by public transit, the primary mode is defined as B, G or J)	B - Public Transit (excluding GO Rail) C - Bicycle D - Auto Driver G - GO Rail J - Joint GO Rail and Public Transit M - Motorcycle O - Other P - Auto Passenger S - School Bus T - Taxi U - Paid rideshare (Uber, Lyft, DriverHer, or other paid rideshare app) (since 2016) W - Walk 9 - Unknown
trip_purp	Purpose of the trip	1 - Home-based work (i.e. home-to-work or work-to-home) 2 - Home-based-school 3 - Home-based-discretionary 4 - Non-Home-based (i.e. neither end is home)

Trip Attributes

Attribute	Description	Code
purp_orig	Origin purpose of the trip (the destination purpose of the previous trip, except for first trip on trip day, which is assumed to be other if the first trip does not start from home, work or school)	D - Daycare (not in 1986) E - Entertainment (1986 only) F - Facilitate passenger H - Home L - Linked trip (1991 only) M - Marketing/ Shopping (not in 1991) O - Other P - Personal (1986 only) S - School W - Work 9 - Unknown
region_orig	Regional municipality of trip origin	1 - Toronto 2 - Durham 3 - York 4 - Peel 5 - Halton 6 - Hamilton 11 - Niagara 12 - Waterloo 13 - Guelph 14 - Wellington 15 - Orangeville 16 - Barrie 17 - Simcoe 18 - Kawartha Lakes 19 - City of Peterborough 20 - Peterborough County 21 - Orillia 22 - Dufferin 23 - Brantford 24 - Brant 88 - No usual place of work 98 - External 99 - Unknown
pd_orig	Planning district of trip origin	See Section 3
gta01_orig	2001 traffic zone of trip origin	2001 Traffic Zone (See Table 4-1 4)
gta06_orig	2006 traffic zone of trip origin	2006 Traffic Zone (See Table 4-1)
ct_orig	Census Tract (CT) of origin	Statistics Canada standard geographical classifications
csd_orig	Census Subdivision (CSD) of origin	Statistics Canada standard geographical classifications
ward_orig	TTS Ward System	Obtain definitions from the Data Management Group

Trip Attributes

Attribute	Description	Code
utm_x_orig	UTM X coordinate of trip origin	Distance east in metres 999999 - Unknown
utm_y_orig	UTM Y coordinate of trip origin	Distance north in metres 9999999 - Unknown
gtyp_orig	Method used to geocode trip origin	A - Address Range or Full Address AD - Address Range (am D - Parcel Dot (1996 & 2001 only) DC - Double Click DD - Drag and Drop E - Emergency Location Code (1996 only) F - MapInfo (1996 only) FSA - FSA G-I - Intersection (Google) G-L - Locality (Google) G-M - Place of Interest (Google) G-N - Neighborhood (Google) G-PC - Postal Code (Google) G-SA - Street Address (Google) G-SN - Route/Street Name (Google) G-T - Transit Station G-U - Unclear Google Accuracy I - Intersection M - Monument N - Neighbourhood OSA - Outside Study Area P - Landmark PC - Postal Code R - Location Unknown / Uncodable S - School SN - Street Name T - Town/municipality U - Geocoding method not recorded Z - Traffic Zone (prior to 2006)

Trip Attributes

Attribute	Description	Code
purp_dest	Destination purpose of the trip	C - Second and subsequent school trips D - Daycare (not in 1986) E - Entertainment (1986 only) F - Facilitate passenger H - Home L - Linked trip (1991 only) M - Marketing/ Shopping (not in 1991) O - Other P - Personal (1986 only) R - Second and subsequent work trips S - First school trip of the day W - First work trip of the day 9 - Unknown
region_dest	Regional municipality of trip destination	Same as region_orig
pd_dest	Planning district of trip destination	See Section 3
gta01_dest	2001 traffic zone of trip destination	2001 Traffic Zone (See Table 4-1)
gta06_dest	2006 traffic zone of trip destination	2006 Traffic Zone (See Table 4-1)
ct_dest	Census Tract (CT) of destination	Statistics Canada standard geographical classifications
csd_dest	Census Subdivision (CSD) of destination	Statistics Canada standard geographical classifications
ward_dest	TTS Ward System	Obtain definitions from the Data Management Group
utm_x_dest	UTM X coordinate of trip destination	Distance east in metres
utm_y_dest	UTM Y coordinate of trip destination	Distance north in metres

Trip Attributes

Attribute	Description	Code
gtyp_dest	Method used to geocode trip destination	A - Address Range or Full Address AD - Address Range (am D - Parcel Dot (1996 & 2001 only) DC - Double Click DD - Drag and Drop E - Emergency Location Code (1996 only) F - MapInfo (1996 only) FSA - FSA G-I - Intersection (Google) G-L - Locality (Google) G-M - Place of Interest (Google) G-N - Neighborhood (Google) G-PC - Postal Code (Google) G-SA - Street Address (Google) G-SN - Route/Street Name (Google) G-T - Transit Station G-U - Unclear Google Accuracy I - Intersection M - Monument N - Neighbourhood OSA - Outside Study Area P - Landmark PC - Postal Code R - Location Unknown / Uncodable S - School SN - Street Name T - Town/municipality U - Geocoding method not recorded Z - Traffic Zone (prior to 2006)
trip_km	Straight line trip length in kilometres	0 - 998 (rounded to closest km) 999 -Unknown
trip_m	Straight line trip length in m	(rounded to closest m)
trip_man_km	Manhattan distance trip length in kilometres	0 - 998 (rounded to closest km) 999 -Unknown
trip_man_m	Manhattan distance trip length in m	(rounded to closest m)
car_pool	Number of people in the vehicle - only applied to auto driver trip (since 2011)	0 - Not applicable 1 - 98 99 -Unknown
hwy407	Use of Hwy 407 (since 2011)	Y- Yes N - No O - Not applicable 9 - Unknown

5.4 Transit attributes

The following data were collected or calculated for each trip made by public transit on the trip day for each person 11 years old and over in the households surveyed in 2016. For public transit trips, detailed information was collected on the routes and the location of transfer points. The attributes and categories are the same for all surveys except as noted. Trip information was collected for household members 6 years old and over in 1986, and 11 and older starting from 1991.

Access/Egress Coordinates: For rail trips on public transit (via TTS Subway or Scarborough RT, or via GO Train) the rail boarding and alighting stations were asked on the survey. If the first transit route boarded was rail, the transit access location coordinates assigned were those of the boarding station. If the last transit route boarded was rail, the transit egress location coordinates assigned were those of the alighting station. In all other instances, the access and egress location coordinates are those of the trip origin and destination. In other words, for non-rail transit trips, the actual transit boarding/alighting locations were not captured, and the trip origins/destinations are used as a proxy for the actual locations.

Table 5-3: Transit attributes

Transit Attributes		
Attribute	Description	Code
hhld_num	Household sample number	A six digit unique identifier
pers_num	Person number within the household	1 - 9
trip_num	Trip number for that person	1 - 99
mode_accs	Mode used to access public transit	C - Bicycle D - Auto Driver M - Motorcycle O - Other P - Auto Passenger S - School Bus T - Taxi U - Paid rideshare (Uber, Lyft, DriverHer, or other paid rideshare app) W - Walk 9 - Unknown

Transit Attributes

Attribute	Description	Code
region_accs	Regional municipality of access point	1 - Toronto 2 - Durham 3 - York 4 - Peel 5 - Halton 6 - Hamilton 11 - Niagara 12 - Waterloo 13 - Guelph 14 - Wellington 15 - Orangeville 16 - Barrie 17 - Simcoe 18 - Kawartha Lakes 19 - City of Peterborough 20 - Peterborough County 21 - Orillia 22 - Dufferin 23 - Brantford 24 - Brant 88 - No usual place of work 98 - External 99 – Unknown
pd_accs	Planning district of access point	See SECTION 3
gta01_accs	2001 traffic zone of access point	2001 Traffic Zone (See SECTION 4)
gta06_accs	2006 traffic zone of access point	2006 Traffic Zone (See SECTION 4)
ct_accs	Census Tract (CT) of access point	Statistics Canada standard geographical classifications
csd_accs	Census Subdivision (CSD) of access point	Statistics Canada standard geographical classifications
ward_accs	TTS Ward System	Obtain definitions from the Data Management Group
utm_x_accs	UTM X coordinate of access point If not boarding subway/GO Train at a station, uses trip origin coordinates	Distance east in metres
utm_y_accs	UTM Y coordinate of access point If not boarding subway/GO Train at a station, uses trip origin coordinates	Distance north in metres

Transit Attributes

Attribute	Description	Code
accs_m	Straight line distance from origin to access point in metres	0 - 5000000 (rounded to closest metre) 9999999 - Unknown
mode_egrs	Mode used after disembarking from public transit	Same as mode_accs
region_egrs	Regional municipality of egress point	Same as region_accs
pd_egrs	Planning district of egress point	See SECTION 3
gta01_egrs	2001 traffic zone of egress point	2001 Traffic Zone (See SECTION 4)
gta06_egrs	2006 traffic zone of egress point	2006 Traffic Zone (See SECTION 4)
ct_egrs	Census Tract (CT) of egress point	Statistics Canada standard geographical classifications
csd_egrs	Census Subdivision (CSD) of egress point	Statistics Canada standard geographical classifications
ward_egrs	TTS Ward System	Obtain definitions from the Data Management Group
utm_x_egrs	UTM X coordinate of egress point If not alighting subway/GO Train at a station, uses trip destination coordinates	Distance east in metres
utm_y_egrs	UTM Y coordinate of egress point If not alighting subway/GO Train at a station, uses trip destination coordinates	Distance north in metres
egrs_m	Straight line distance from egress point to destination in metres	0 - 5000000 9999999 - Unknown (rounded to closest metre)
n_route	Number of transit routes or links used for the trip	1 - 6
route_1	Route used for first link	Four or five digit transit route code (See Table 5-7)
route_2	Route used for second link	As for route_1
route_3	Route used for third link	As for route_1
route_4	Route used for fourth link	As for route_1

Transit Attributes		
Attribute	Description	Code
route_5	Route used for fifth link	As for route_1
route_6	Route used for sixth link (starting from 2001)	As for route_1
sub_on	TTC subway boarding station (starting from 2001)	See Table 5-4
sub_off	TTC subway alighting station (starting from 2001)	See Table 5-4
go_on	Go Rail boarding station (starting from 2001)	See Table 5-5
go_off	Go Rail alighting station (starting from 2001)	See Table 5-5
n_go_rail	Number of links on GO Rail	0 - 6
n_go_bus	Number of links on GO Bus	0 - 6
n_subway	Number of links on TTC subway or RT	0 - 6
n_ttc_bus	Number of links on TTC Bus or streetcar	0 - 6
n_local	Number of links on other local transit properties (i.e., non-TTC and non-GO)	0 - 6
n_other	Number of links on other transit systems (e.g., VIA, Grey Coach)	0 - 6
oper_code	Transit operator code for the last non-TTC, non-GO transit route	See Table 5-7
use_ttc	TTC trip	Y - Yes N - No

SS09	Bloor
SS26	Danforth
SS29	Kennedy
SS38	Union

5.6 Transit Operator Codes

Table 5-6: Transit Operator Codes (for last non-TTC and non-GO transit routes)

Operator	Operator Code	Route Prefix
Not Applicable	0	-
Barrie	18	BA
Brampton	40	BR
Brantford	65	BT
Burlington	46	BU
Durham Regional	81	D
Waterloo / Grand River	11	WA
Guelph	14	GU
Hamilton	48	HA
Milton	44	ML
Mississauga	20	MS
Niagara Falls	22	NI
Oakville	42	OA
Peterborough	16	PE
Port Colborne	25	PC
St. Catharines	12	SC
Welland	24	WE
York Regional	61	Y
Other	90	BD, CO, FE, FG, LI, MI, NI, NR, OR, OV, RO, WB
Non Municipal	92	SN, XA, XB, XC, XF, XG, XH, XM, XN, XQ, XR, XT, ZZ

In 2016, operator code 90, Other, included the following transit operators (with route prefixes noted in brackets): Bradford (BD), Collingwood (CO), Fort Erie (FE), Fergus (FG), Lindsay (LI), Midland (MI), Niagara Region (NR), Orillia (OR), Orangeville (OV), Wasaga Beach (WB).

In 2016, operator code 92, Non Municipal, included the following operators (with route prefixes noted in brackets): Seneca (SN), 'Private (not otherwise classified)' (XA), Charter (XB), Canada Coach (XC), Island (XF), Grey Coach (XG), Ontario Northland (XM), Greyhound (XN), Private (XQ), VIA (XR), and Wheel Trans (ZZ).

5.7 Transit route codes

The following lists contain only operator and route codes used in coding the responses to the 2016 TTS. The lists therefore do not necessarily include all routes in the respective transit system or those used in previous surveys. Some routes may have been identified by multiple variations of the route names, but are identified below with the first route name in the database of routes used for surveying. The numbers given are the expanded 24-hour totals from the 2016 survey.

Table 5-7: Transit Route Codes

Transit Routes								
Code	Route Name	Route 1	Route 2	Route 3	Route 4	Route 5	Route 6	Total

SECTION 6: Unweighted and Weighted Frequency Counts

6.1 Household tabulations

The following tabulations are “number of households” stratified by various categories in the database. The “Number of Records” is the actual number of survey records in the Household file while the “Expanded Frequency” is the total after the expansion factors have been applied. Expanded totals for 2011 only are not valid and are excluded from the tabulations. For all other years, the expanded totals are valid.

Household Tabulations

*%s for household income include answers of "decline / don't know"

6.2 Person tabulations

The following tabulations are “number of persons” stratified by various categories in the database. The “Number of Records” figures present the actual number of survey records in the Person file while the “Expanded Frequency” figures are the expanded results representing the universe.

6.3 Trip tabulations

The following tabulations are “number of trips” stratified by various categories in the database. The “Number of Records” figures present the actual number of survey records in the Trip file while the “Expanded Frequency” figures are the expanded results representing the universe. Trips are collected for persons aged 6 and over in 1986 and for persons aged 11 and over in 1991 onwards. Trips are collected for all trips made by motorized means, but only for walking trips that were either to or from work or school or if they connected other eligible trips (in other words, a ‘round trip’ journey made entirely via walking would not be captured as a trip in this survey).

6.4 Transit trip tabulations

The following tabulations are “number of transit trips” stratified by various categories in the database. The “Number of Records” figures present the actual number of survey records in the Transit file while the “Expanded Frequency” figures are the expanded results representing the universe. Trips are collected for persons aged 6 and over in 1986 and for persons aged 11 and over in 1991 onwards.

Notes:

1. Total boardings are the sum of boardings for the transit operator across 'Route 1' through 'Route 6', where Route 1 is the first transit route boarded in a given trip, Route 2 is the second transit route boarded, and so on.
2. Total Trips are the number of trips that used any services run by the transit operator on any of the routes. These numbers do not match the total in the previous tabulations due to multiple counting of trips when a combination of transit services was used (i.e. the same individual trip is counted once for each transit service used).
