FOREWORD

This report is designed to give potential users of the 1986, 1996, 2006, 2011, 2016 and 2022 Transportation Tomorrow Survey (TTS) data an understanding of the contents of the databases maintained at the Data Management Group. Users wishing to obtain information from the databases should contact the Data Management Group.

FURTHER INFORMATION

The Transportation Tomorrow Survey (TTS) is part of an ongoing data collection program by the Transportation Information Steering Committee (TISC). The survey data (2022, 2016, 2011, 2006, 2001, 1996, 1991 and 1986) are currently under the care of the Data Management Group (DMG). This group is responsible for maintaining the TTS databases and making available appropriate travel information for any urban transportation study in the area. Requests for information from the TTS, or enquiries related to the contents of this report, should be directed to the address below.

Data Management Group

1 DIFFERENCES BY TTS CYCLE

Users of TTS data should be aware of the following differences when making comparisons between the 1986, 1991, 1996, 2001, 2006, 2011, 2016, and 2022 Transportation Tomorrow Surveys.

1.1 Survey Geography

The 1986 survey covered the Greater Toronto and Hamilton Area (GTHA) defined as the Municipality of Metropolitan Toronto plus the Regional Municipalities of Durham, York, Peel, Halton and Hamilton.

In 1991, the survey area was expanded to cover the municipalities adjacent to the GTHA boundary, referred to as the 'fringe area'. (The 1991 survey data is not included in this report.)

Extending well beyond the boundaries of either of the earlier surveys, the 1996 survey includes all of the GTHA plus Peterborough County (partial coverage), City of Peterborough, Victoria County (now City of Kawartha Lakes), Town of Orangeville, Simcoe County (partial coverage), City of Barrie, Wellington County (partial coverage), City of Guelph, Waterloo Region and Niagara Region. A small portion of Dufferin County adjacent to Orangeville was also included. Northumberland County was partially represented by interviews conducted during the training of interviewers.

In 2001, changes to the survey area relative to the 1996 TTS were the inclusion of the whole of Simcoe County, the addition of the City of Orillia, and the exclusion of the Regional Municipality of Waterloo and Northumberland County.

The 2006 survey area was expanded to include the Regional Municipality of Waterloo, City of Brantford and Dufferin County. Interviews were conducted in Brant County during the training of interviewers.

The survey area in the 2011 TTS was the same as in 2006 with the inclusion of Brant County.

The survey area in the 2016 TTS was the same as in 2011.

The 2022 TTS survey area was expanded to cover the County of Grey, the County of Northumberland, and the Town of the Blue Mountains.

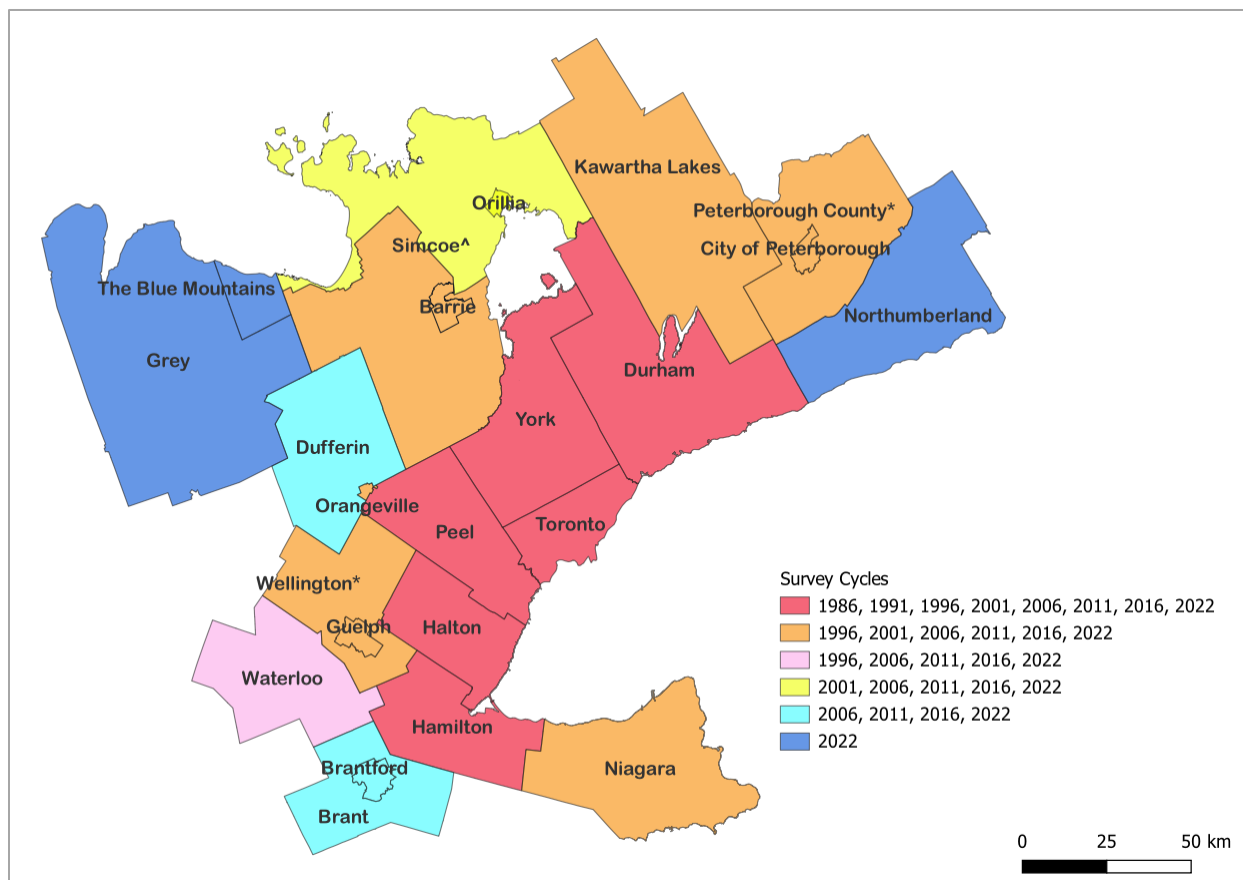

Within the study area, some municipal boundaries may have changed as municipalities have grown over the years. For example, certain cities have extended their city limits, while the counties they are located in have lost areas to these municipal expansions. There have also been amalgamations. Of note, in 1998, the regional municipality of Metropolitan Toronto and its constituent municipalities amalgamated as the City of Toronto. In the TTS data set, the

current City of Toronto is organized into 16 planning districts. It may be noted that, for continuity with previous survey cycles, the City of Toronto’s ‘historic municipalities’—the former municipalities of East York, Etobicoke, North York, Scarborough, York, and Toronto—are still used for some reports on the TTS data. In 2001, the current City of Hamilton was amalgamated from the former municipalities of Hamilton, Flamborough, Dundas, Ancaster, Glanbrook, and Stoney Creek. These areas within the City of Hamilton are still used as planning districts in the TTS data set.

It may be noted the code list for municipalities/planning districts in Section 3 includes some codes that were only used in certain years.

Figure 1, following, illustrates the current bounds of the study area, as well as the TTS’s evolution from its coverage of only the GTHA in 1986 to its coverage of the current study area.

Figure 1. Geography of the 2022 TTS, with years of participation

* TTS study area includes a only a portion of each of Wellington and Peterborough counties.

^ Simcoe County was only partially surveyed in 1996.

1.2 Informed Consent

Since 2016, in order to comply with privacy legislation, the survey phone interview scripts and online survey design were revised to ensure that explicit informed consent to collect respondent's survey information was asked for and recorded prior to completion of the survey. This in itself should not have any impact on the quality of the recorded data.

1.3 Dwelling Type

Since 1996, Townhouse was added as a dwelling unit type.

1.4 Household Income

Since 2016, the household's total household income category has been collected. For the first time in 2022, households that refused to provide their income range were asked if they would consider providing their income at a broader range. The income ranges used in 2022 differ from those in 2016.

1.5 Minimum Age for Trip Capture

In 1986, the minimum age of persons for which trip data was collected was 6. Starting from 1991, the minimum age was 11. In 2022, the minimum age was reduced to 5, in order to capture younger children's school trips. Trips for children under 5 are not captured as very young children rarely travel unaccompanied by another family member (whose travel will be captured); this also reduces response burden.

Comparisons across TTS cycles should be made with consideration of the age of trip capture.

1.6 Usual Place Of Work, Availability Of Free Parking, School Location

Usual place of work, availability of free parking at work and school location have been collected since 1991. Since 2001, school names have been recorded and represented by school codes in the final database. The school codes used in different cycles may sometimes differ.

1.7 Travel to Work

In 2022, weekday travel to work was captured for those with usual workplace outside the home.

1.8 Employment or Student Status

In 1986, student and employment status information were collected regardless of age but were recorded as a single attribute (i.e. either employed or a student, but not both). Since 1991, employment and student statuses have been recorded as two separate attributes to allow for all combinations of full and part time status (except full time employed at the same time as full time student, which was not allowed in earlier cycles, but which was allowed starting in 2016).

Except for 1986, employment and student status information were not collected for persons under the age of 11. Persons aged from 6 to 10 are assumed to be full time students.

1.9 Transit Pass, Occupation, No Work Trip

Since 1996, possession of a transit pass, occupation description, and confirmation of whether a full-time employed person who did not make a work trip worked from home on the trip day have been collected.

In 2016, Presto was added as a transit pass type, while GO Transit Pass (which had been a response option in 2011 and prior) was removed. In 2022, possession of a Transit Pass was collected as a Yes/No response option, with no specific Transit Pass types listed as response options.

In 2022, occupation type categories were expanded to include eleven categories of occupation types. The new categories can be aggregated to the five categories used in previous cycles.

1.10 Bicycle and Walk Trips

In 1986, information on bicycle trips was only collected for trips to or from school or work. Starting from 1991, information was collected for all bicycle trips.

Prior to 2022, walk trips were only collected for trips to and from work or school or when the walk trip is a connecting trip within a chain of trips that use other non-walk modes. Updated in 2022, walking trips are now collected for non-work/school purposes (while continuing to exclude recreational walk trips that begin and end at the same place without stopping at a destination, such as taking a dog for a walk).

1.11 Trip Start Times

In 1986, trip start times were not recorded for some school trips made by persons under the age of 14. Starting from 1991, trip start time was recorded for all trips. This difference must be allowed for in making comparisons of trip start time distributions, particularly for walk, cycle, school bus and, to a lesser extent, transit trips.

1.12 Trip Purpose

In 1986, shopping, entertainment and personal business trips were recorded as three separate trip purposes. In 1991, these trip purposes were combined under the 'other' category. From 1996 onwards, shopping was again distinguished as a separate trip purpose.

From 1991 onward, 'other' included personal business, medical, social, restaurant, recreation, entertainment (with the 1986 responses for entertainment and personal businesses being collapsed into this category). In 2022, six new categories were made including services; health

and personal care; restaurant, bar, or coffee; visiting friends, family at their residence; recreation, sports, leisure, arts; and worship or religious activity.

In 2022, a new trip purpose was added to capture the pick up of a package or online purchase. In previous cycles, such purposes would likely have been included in either 'shopping' or 'other'.

Since 1991, daycare pickup or dropoff was recorded as a separate trip purpose. In 1986, trips to daycare would likely have been included in the 'facilitate passenger' category.

In 2022, work trips were split out into three separate trip purposes, including travel to work, work-related/business meeting (other than usual workplace), and working on the road/itinerant workplace/no fixed work address.

Prior to 2022, pick up or drop off a passenger was recorded as one trip purpose of 'facilitate passenger'. In 2022, pick up and drop off are recorded as two separate trip purposes.

In 2022, a purpose of 'voting in the municipal election' was included and displayed on for if the travel day was election day.

The eighteen detailed purposes used in 2022 can be aggregated to the seven purposes used in 2016 and earlier surveys.

1.13 Travel Method

Since 2016, paid rideshare (e.g., Uber, Lyft, DriveHer) was added as a travel method.

In 2022, e-scooter or other electric mobility device was added as a travel method.

1.14 Ethnicity and Immigration Status

In 2022, questions about the ethnic origin of household members was added.

A question about immigration status was also added (if not a Canadian citizen at birth, asked recency of immigration).

1.15 Sampling Rates and Sampling Processes

The sampling rate is the percentage of households in the survey geography that have been surveyed. The sampling rates have varied by cycle as follows:

1986: Random sample of households throughout the survey area at a uniform 4.2% sampling rate.

1991: Different sampling rates for high and low growth areas (5.0% in high growth and 0.5% in low growth areas. There was significantly more variance due to random sampling in the 1991 data than for 1986 and 1996, particularly for areas sampled predominantly at the 0.5% rate such as City of Toronto.

- 1996: Random sample of households throughout the survey area at a uniform 5.0% sampling rate.
- 2001: The sample selection and sample control process were based on Forward Sortation Areas (FSAs) i.e. the 1st three characters of the postal code. Some FSAs were sampled at a higher rate than others were, and within most FSAs, apartment buildings are known to be under-represented relative to other types of housing. Overall, the sample represented 5.7% of all households.
- 2006: Sampling was originally based on a random selection of households throughout the survey area. Analysis of phase 1 interview statistics showed the response rate was 16% higher for single units. In order to compensate for the low response rate for multi units (i.e. apartments), a higher sample rate was used in the later interview phases. Overall, the sample represented 5.2% of all households.
- 2011: The sample selection and sample control process were based on FSAs with a higher sample rate for multi units. This survey obtained an overall 5.1% sampling rate across the study area.
- 2016: The sample selection and sample control process for the 2016 survey cycle was based on FSA, further stratified by dwelling type (house or multi unit) and sample type (address-only, and address-and-phone). Targets were set to achieve an overall sampling rate of 5.0% in all regions except Hamilton, which had a 3.0% sampling rate target.
- 2022: The sample selection and sample control process for the 2022 survey cycle was based on FSA, further stratified by dwelling type (house or multi unit) and sample type (address-only, and address-and-phone). An overall sampling rate of 5.0% target was set in all regions, with the exception of Kawartha Lakes where a 2.5% sampling target was set. Two datasets were obtained: one including surveys with only household and demographic information (but which either did not fully complete the trip sections or which were rejected during trip validation but had good household and demographic information) and one with just full survey completions with validated trip information. For the larger dataset including surveys with only household and demographic information, a 5.1% sampling rate was achieved relative to 2021 Census counts. For the dataset with validated full survey completions and trip information, a 4.4% sampling rate was achieved relative to 2021 Census counts, or 4.3% of estimated private households in 2022. The survey frequencies presented in this report are based on the latter dataset with trip information.

For more information on sample selection, please refer to the report *2022 Transportation Tomorrow Survey: Design and Conduct of the Survey*.

1.16 Sample Frame

The sample universe (the target population the survey is intended to represent) for all cycles has been private households occupied by usual residents.

From 1986 to 2011, the sample frame was based on telephone subscriber lists. Listings with addresses were randomly sampled and sent survey notification letters, followed by telephone calls to complete survey interviews over the phone. Up to 2001, the telephone subscriber lists provided excellent coverage of almost all private households, with very few household not having a land line telephone. By 2006, cell-phone-only households were beginning to emerge, and the proportion of all households with a traditional land line telephone having reduced somewhat to about 93%, which may have had only a modest impact on the representativeness of a sample drawn from listed land lines (with younger households in particular being less likely to have landlines). For the 2011 survey cycle, conducted in the fall of 2011 and the fall of 2012, cell-phone-only households were more common, with the proportion of households with traditional land lines being less than 71%, and the proportion of younger households with land lines having diminished considerably further. The exclusion of cell-phone-only households from the sampling frame had a more pronounced impact on the representativeness of the expanded survey data, particularly in areas with higher concentrations or younger households and smaller households (e.g., downtown Toronto).¹

In 2016, in order to include cell-phone-only households in the survey invitations, the survey sample was drawn from a database of mailable addresses, which was matched, where possible, to telephone numbers listed in the telephone subscriber directory. Addresses not matched to a telephone number received a survey letter inviting them to participate online or via phone while addresses matched to a telephone number received both a letter and telephone calls. When the address listings were randomly sampled from across the study area, appropriate volumes of address-only and address-and-phone listings were drawn to take into account the higher response rates for address-and-phone samples, and ensure that the final completed survey sample would have an appropriate balance of address-only and address-and-phone households. This core sample was supplemented by the testing of a small 'phone-only' sample, composed of equal parts Random Digit Dialed (RDD) phone numbers, listed phone numbers without an address in their listing, and cell phones. After an initial trial, the phone only sample was abandoned, and thus only accounts for a small proportion of the total sample.

¹ By 2013, fully 60% of households with all occupants under the age of 35 were cell-phone-only households. Figures on incidence of land line telephone subscriptions and cell-phone-only households cited in the above paragraph are from Statistics Canada's Residential Telephone Service Survey (RTSS), 2005, 2008, 2010, and 2013 data releases.

In 2022, an address-based sampling frame was used. Addresses were drawn from a Canada Post database of all mailable addresses in the study area, including both households with landlines and households without. The portion of the addresses that could be matched to listed phone numbers were retained to form the address-and-phone sample, and households without a listed landline formed the address-only sample. The final sampling plan again included a mixed sampling approach involving address-and-phone and address-only records. In addition, a small sample of ‘volunteer’ sample was included, consisting of residents who were not randomly sampled but were interested in and allowed to participate in the survey.

Table 1-1 lists the number of survey completions for each sample type. It should be noted that the survey data set used for most analyses and modelling is the one with full survey completions with valid trip data. The version that includes surveys with only household and demographic data is held by the Data Management Group.

Table 1-1 2022 TTS – Type of Sample

Sample	Final Survey Completions with Trip Data (after validation)	Final Survey Completions with ONLY Household & Demographic Data (after validation)	Total	% of Total
Address-and-phone	61,338	6,407	67,745	36.4%
Address-only	96,719	20,805	117,524	63.2%
Volunteer*	605	217	822	0.4%
	158,662	27,429	186,091	100.0%

* Volunteer sample includes households who contacted the call centre via phone or went to the survey website and obtained an access code through the open survey link. As the number of volunteers was negligible, and unlikely to impact the representativeness of the randomly selected sample, they were included in the final dataset.

1.17 Survey Completion Method

From 1986 to 2006, all surveys were completed via telephone interview. In 2011, online surveying was introduced, with 12% of respondents completing the survey online, and 88% by phone. In 2016 and 2022, a higher proportion of completions were obtained online in part due to the sample composition, with the address-only portion of the sample receiving only a survey letter and no phone contact, and in part to the public’s increasing comfort in completing online surveys. In 2016, 64% of all survey completions were completed online, while 36% were completed over the telephone. In 2022, 88% of all survey completions were completed online, while 12% were completed over the telephone.

1.18 Changes in Survey Data Weighting

From 1986 through 2006, the survey sample collected was weighted with simple expansion factors that expanded the households surveyed to match the Census household counts by geography. In 2006, the weighting controls were conducted with aggregations of Census tracts.

In 2011, a new approach to data weighting was taken that expanded the data to represent total population rather than total households. Adjustments were first made to expand the number of households to represent total apartments and non-apartments in the geographies of the study area. This was followed by adjustments such that the expanded person-level survey data represented the Census distributions of the total population by age group (with each household receiving a household weight based on the mean of the person weights for persons in the household). The Census counts of total population by age group include people living in collective dwellings.² Therefore, the survey results for the 2011 cycle slightly over-represent the survey's target population of people living in private dwellings (by 1.4%) and thus may also slightly over-represent the number of trips made. As the final adjustment was to population counts, the weighted household counts in 2011 deviated somewhat from the total private households in each study area per the Census.

In 2016, a more complex approach to data weighting was taken that expanded the data to match total households once again. An iterative proportional fitting method was undertaken to adjust the household weights according to the following controls: dwelling type, household size, and householder age by gender. As the method employed made household-level adjustments based on the age/gender demographics of all householders, the 2016 expanded household counts in the survey data match the Census household counts. The weighted 2016 survey data closely match Census household size and dwelling type distributions, whereas previous surveys may have had more variance from Census household size and dwelling type distributions. The weighting also included an adjustment for an apparent over-representation of GO Train users.

In 2022, the data weighting calibrated the data against household counts using the same iterative proportional fitting method as in 2016. The same weighting controls were used, including the adjustment for GO Train ridership, with some refinements to the stratifications used and to the algorithms used. In addition, Labour Force Survey estimates from the fall of 2022 were introduced as a weighting control at the Census Metropolitan Area level of geography, in order to better balance the incidence of full-time workers, part-time workers, and non-workers. As the survey had been delayed by one year due to the COVID-19 pandemic, the 2021 Census counts were projected forward to 2022 estimates using the annual population

² In 2011, 1.4% of the population in the study area did not live in private dwellings. In 2016, the proportion was similar, at 1.3%.

growth rate from 2016 to 2021 for each expansion geography. As in 2016, the weighted 2022 survey data closely match Census age, gender, household size and dwelling type distributions.^{3,4}

1.19 Analysis of Household Level Information in the 2011 TTS Data

As noted above, the 2011 TTS was unique in that the survey weighting was applied at the person-level, with the household weight subsequently assigned as the mean of the person weights for all household members in each household. Therefore, the expanded value of household attributes which count the number of householders with certain attributes might not match the expanded value based on person attributes from the person tables. For any 2011 tabulations, these household attributes should only be used as filter variables. The 2011 TTS household attributes with this issue include the following: the number of people in the household, the number of people with drivers licenses in the household, the number of workers (full-time, part-time, and work-from-home) in the household, and the number of students in the household.

This issue does not apply to the 2022 or 2016 data, nor to earlier survey cycles from 1986 through 2006.

1.20 Comparability of Data from Different Survey Cycles

Caution should be undertaken when comparing data between survey cycles. The comparability of the datasets for individual cycles may be affected by a number of factors including: how well the target population (residents of private households) is represented by the sample source used in the given cycle; changes in survey methods; and how the survey sample was weighted and expanded to represent the total population.

As noted in the preceding sections of this report, from 1986 through 2001, the sample source of listed land-line telephone subscribers provided excellent coverage of all private residences in the survey area, the survey methods were the same, and it was possible to weight the data with simple expansion factors such that the weighted data matched household counts. The 2006 TTS was the first survey cycle affected by changes in household telephone subscription habits. The 2011, 2016 and 2022 survey cycles had a number of differences from previous cycles in terms of

³ Note: the age distributions take into account the proportion of population in each age range in each Census Subdivision estimated to live in private residences as opposed to collective dwellings, with a higher proportion of older people likely to live in collective dwellings such as seniors' care homes. As the age distributions used in the data weighting are for population living in residential dwellings, the survey distributions may not always line up with the Census counts by age range for the entire population.

⁴ It may be noted that while the expanded household counts for each survey geography are almost identical to the Census counts projected forward to 2022, the expanded population counts are sometimes slightly less than the 2022 Census projections for population living in private households. This may be due to differences in the growth of dwelling units relative to population growth; under-representation of larger households (e.g. those with five or more household members) in some areas; and limits placed on extreme weights.

the coverage of population universe by the sample frame, survey methods, response rates, and data weighting methods. In particular, the 2011 TTS had no coverage of cell-phone only households. If the residents of cell-phone-only households had different demographics and travel behaviours than those in households with traditional land lines, this may have had an impact on the representativeness of the 2011 survey sample. As also noted earlier, the 2011 TTS also over-represented the total number of people living in private households by 1.4%. In the 2016 and 2022 survey cycle, address-only sample was used to achieve coverage of cell-phone-only households. It may be noted that address-only samples have somewhat lower response rates and may have more non-response bias than for address-and-phone samples.

The 2022 TTS also introduced significant changes to trip capture and trip definition:

- The 2022 TTS collected trip data from those 5+ years of age instead of those aged 11 years or older.
- Another significant change was made to trip definition, updated in the TTS 2022 to include walking trips for non work/school purposes (while continuing to exclude recreational walk trips).

When comparing the 2022 trip-level results to previous survey cycles for longitudinal trend analysis, the 2022 survey data can be filtered to just the trips made by persons 11+ years of age and excluding the types of non-commute walking trips which would not have been captured in previous cycles, which have been flagged in the dataset.

Further research to explore the impacts of changing sample frames, survey methods, and data weighting on the survey results is recommended. For the above reasons, caution should be undertaken when comparing the results from the 2006, 2011, 2016 and 2022 survey cycles.

2 DATA EXPANSION

The data for each survey have been expanded to represent the total households or total population of the survey area in each survey cycle.

In the 1986, 1991, 1996, 2001, and 2006 surveys, survey expansion factors were calculated based on geographic areas called expansion zones. In 2001, these were based on postal forward sortation areas (FSAs), while in 2006, these were based on aggregated Census Tracts. The number of households (private dwelling units occupied by usual residents) in each expansion zone was obtained from the Canada Census and used as the control total for calculating the expansion factor. The same expansion factor was applied to all the households in an expansion zone and to all household, person, and trip data associated with each household.

In the 2011 survey, the weighting method took into account adjustments for age distribution, and the final expansion was to match Canada Census population counts rather than household counts. Postal FSAs were used as the geographical basis for expansion zones to expand to the Census counts, except in more rural areas, for which the first five digits of postal codes were used to expand to Canada Post delivery counts. To adjust for observed bias in the 2011 dataset by age, adjustment factors were then applied using Census counts aggregated by age range. This step also had the effect of adjusting the weighted survey counts to match total population (rather than to total households as in previous cycles). As 1.3% of the population lived in collective dwellings (prisons, student residences, seniors care facilities) or was homeless, and thus not part of the TTS's target sample frame, the 2011 cycle slightly over-represents the target population of people living in private residences. In the 2011 data, the person-level expansion factors were applied to the person and trip data, while the household expansion factor included in the database is the mean of the person factors applied to each person in a given household. For the 2011 data, household tabulations will only be consistent with person and trip tabulations if they are based on complete household data. The use of the household expansion factors for tabulation of household data based on any subset of household members (e.g. number of persons with a driver's licence) is not valid. These attributes should only be used as filters when performing person or trip tabulations.

Beginning in 2016, aggregations of Statistics Canada Aggregated Dissemination Areas (ADAs) have been used as the geographical basis for expansion zones.⁵ In order for the geographical expansion zones to align better with municipal and planning district boundaries, a small number

⁵ ADAs were created for the 2016 Census, covering the entire country to ensure the availability of census data across all regions of Canada. They are formed from Census Tracts within Census Metropolitan Areas and tracted Census Agglomerations, Census Subdivisions or Dissemination Areas, and generally contain a population between 5,000 and 15,000.

of ADAs were split by Census Subdivision (in cases where a rural ADA included multiple Census Subdivisions), Census Tract, and/or Dissemination Area. In 2022, the expansion zones were based on those created in 2016, with some refinements to split 2016 expansion zones that had significant growth (and thus very large samples in 2022), combine some 2016 expansion zones that had small samples in 2022, and to create new zones for the new geographies added to the study area in 2022.

In the 2016 survey, the weighting method took into account adjustments for dwelling type, household size, and the distribution of the population by age and gender, with the data expanded to match Canada Census counts of households. As the survey had been delayed by one year due to the COVID-19 pandemic, the 2021 Census counts were projected forward to 2022 estimates using the annual population growth rate from 2016 to 2021 for each expansion geography.

In 2022, Labour Force Survey estimates from the fall of 2022 were introduced as a weighting control at the Census Metropolitan Area level of geography, in order to better balance the incidence of full-time workers, part-time workers, and non-workers.

In 2022, the Census-based age distributions used as data weighting controls were adjusted to take into account the proportion of population in each age range in each Census Subdivision estimated to live in private residences as opposed to collective dwellings, with a higher proportion of older people likely to live in collective dwellings such as seniors' care homes. As the age distributions used in the data weighting are for population living in residential dwellings, the survey distributions may not always line up with the Census counts by age range for the entire population.

In order to address the challenge of making weighting adjustments for both household-level and person-level controls, an iterative proportional fitting method was used in both 2016 and 2022. First, adjustments to the household weights were made to match dwelling type distributions within each expansion zone, followed by adjustments to match household size distributions. After this, the population distributions by age and gender were compared to Census counts within each expansion zone (with some discounting of persons over the age of 75 years to account for seniors living in collective dwellings), with each household factor receiving an adjustment factor computed as the average of the theoretical person-level adjustments for people within the household. This entire process was repeated until the weights converged on a solution that generally satisfied both the household- and person-level controls from the Census. During this iterative process, an adjustment was made to better control the number of GO Train users to better match GO Train ridership, but the other household controls were allowed to take precedence over this adjustment. Final calibrations to the weights were made such that the survey data matched the Census control counts of private dwellings occupied by usual

residents. The resulting household weight was then applied to all person and trip data associated with the given household.

The weighted 2022 survey data closely match Census household size and dwelling type distributions. However, it may be noted, the expanded population counts are sometimes slightly less than the Census distributions for population living in private households. This may be due to one or more of the following reasons: differences in population and dwelling unit growth rates (i.e., population growth rates were universally applied to dwelling units and to population, however, it may be possible that dwelling unit growth may differ from population growth);⁶ some under-representation of larger households (e.g. those with five or more household members) in some areas; and/or limits placed on extreme weights.

Details of the expansion process and the expansion factors used in the previous surveys are contained in the individual data guides and expansion reports for those years. Details of the 2022 data expansion are contained in the report *2022 TTS: Data Expansion and Validation*.

Table 2-1 provides a summary by planning district and compares the expanded totals from the survey, both for dwelling units and for population, with data from the 2021 Census projected forward to 2022. The survey counts are based on the final dataset to be used for analysis and modelling purposes, that composed of validated surveys with full trip information. The sampling rate listed is based on 2022 dwelling estimates, not the 2021 Census counts used when setting survey targets for the administration of the survey.

Since expansion adjustment was made at household level, as one would expect, there were no significant differences in households. However, there may be some under-representation of population for the reasons noted above.

⁶ Only one growth factor was applied to both dwelling counts and population (i.e., different growth rates were not applied to dwellings and to population). To apply differential growth factors would require a more sophisticated forecasting exercise (e.g., taking into account different dwelling growth rates by dwelling size / household size) that was beyond scope for this project.

Table 2-1 Validation of 2022 TTS Expansion Factors

† A portion of the counties of Wellington and Peterborough are included in the study area. †† The target sampling rate for Kawartha Lakes was 2.5%.

3 TTS GEOGRAPHIES

Locations captured in the 2022 TTS have been geocoded to a number of geographies, including Region, Planning District, historic municipality, municipal ward, traffic zone, and Statistics Canada standard geographical classifications such as Census Subdivision. Municipal geographies are detailed below.

3.1 Regions

Table 3-1 TTS Regions

Region	Region Name	# of Planning Districts	Planning Districts
0	Not applicable	0	0
1	Toronto	16	1 - 16
2	Durham	8	17 - 24
3	York	9	25 - 33
4	Peel	3	34 - 36
5	Halton	4	37 - 40
6	Hamilton	6	41 - 46
11	Niagara	12	51 - 62
12	Waterloo	7	63 - 69
13	Guelph	1	70
14	Wellington†	4	71 - 79
15	Orangeville	1	80
16	Barrie	1	81
17	Simcoe	16	82 - 88, 127 - 135

20	Peterborough County†	5	104 - 111
21	Orillia	1	136
22	Dufferin	7	140 - 146
23	Brantford	1	147
24	Brant	1	124
25	Northumberland	8	148 - 155
26	The Blue Mountains	1	156
27	Grey	8	157 - 164
88	No Usual Location	1	888
98	External, External Undefined	1	998
99	Unknown	1	999

†A portion of the counties of Wellington and Peterborough are included in the study area.

3.2 Planning Districts

TTS Planning Districts are listed below for each Region, along with notes on when certain municipalities amalgamated and on when newer geographies were included in TTS survey cycles. 2022 traffic zones are also listed. PD codes used in previous survey cycles which have been replaced by new PD codes are shaded in grey.

Table 3-2 TTS Planning Districts

	Region	PD	Description	Notes	2022 TZ
	0	0	Not employed or not a student		0
Toronto	1	1	PD 1 of Toronto		1001 - 1095
	1	2	PD 2 of Toronto		1096 - 1138

3.4 Geocoding-Related Fields

Each location captured has the accompanying fields indicating how the location was captured and the precision of the returned search result and coordinates.

Table 3-5 Method of location capture (gmth)

gmth Code	Description
0	Not applicable (no location captured)
1	Autocomplete (search)
2	Geocoded from address
3	Double-Click (map interaction)
4	Drag&Drop (map interaction)
7	School selected from list
8	Manually changed by coder (post-processing)

Table 3-6 Precision of location captured (gtyp)

gtyp Code	Description
0	Not applicable (no location captured)
1	Full Address
2	Intersection
3	Landmark
4	Postal Code
5	Neighbourhood
6	Address Range
7	Street Name
8	FSA
9	Town/municipality
11	Street Address (Google)
12	Intersection (Google)
13	POI (Google)
14	Postal Code (Google)
15	Neighborhood (Google)
16	Route/Street Name (Google)
17	Locality (Google)
18	Transit Station
19	Unclear Google Accuracy
20	Plus Code (Google)
90	Geocoding method not recorded
91	Flagged as Unk/UC but has coordinates
98	Outside Study Area
99	Location Unknown / Uncode-able / Accuracy unknown

4 TRAFFIC ZONES

The following table illustrates the correspondence between the traffic zone systems in 2001, 2006, and 2022 versions. The 2022 survey data are coded to both the new 2022 and older 2006 traffic zone systems, with respective field name prefixes of tts_ and gta06.

Table 4-1 Survey Area Zone Numbering

Region	Agency	2001 TZ	2006 TZ	2022 TZ
0	Not applicable	0	0	0
1	Toronto	1 - 481	1 - 625	1001 - 1659
2	Durham	501 - 765	1001 - 1334	2001 - 2334

98	External Undefined	4000	9998	99998
88	No Usual Location	8888	8888	88888
99	Unknown	9999	9999	99999

†Only a portion of the counties of Wellington and Peterborough are included in the study area.

'0' and '8888' are used where a traffic zone specification is not applicable. Individuals who are not employed or are not students are assigned a zone code of '0' in the applicable zone field. Individuals who have no usual place of work or school are assigned the code of '8888' in the zone field.

'9998' (external undefined) identifies points that are external to the zone system. It may be noted that the traffic zone coding system extends beyond the 2022 TTS study area to include some municipalities in nearby areas (zones 90001-90010), which are detailed in the next table.

'9999' identifies points that are unknown.

5 TTS DATABASES

5.1 Household Attributes

The following data were collected or calculated from the TTS for each household that was surveyed in 2022. The attributes and categories are the same for all surveys unless noted otherwise.

Table 5-1 Household Attributes

Household Attributes

Field	Description	Values
Survey Info		
hhld_num	Unique numeric ID for household	6-digit number between 100001 and 300000
sampletype	Sample type	1 Address and phone 2 Address-only 7 Volunteer sample
surveymethod	How survey was completed	1 Telephone 2 Online 3 Mobile 4 Mixed Mode (Online/Phone) 5 Mixed Mode (Mobile/Phone) 6 Mixed Mode (Online/Mobile)
rec_mail	Receipt of advanced letter	N No Y Yes 9 Unknown
language	Official language of survey completion recorded in system. Note: may not be accurate if the interviewer or online respondent completed the survey in one language but then toggled the language mode at the end.	In 2022: 1 French 2 English Previous cycles: C Cantonese E English F French G Greek I Italian M Mandarin O Other

Household Characteristics		
n_person	Number of persons normally living in household. In cases of split custody, the instruction was to include children only if they were present in the household for the Travel Day. 2011 TTS only: The expanded value of this attribute might not match the expanded value based on person attributes.	1-11 (2022) 1-16 (1996-2016) 1-10 (1986) 99 Unknown
dwell_type	Type of dwelling Note: 'Other, specify responses' are all recoded to one of the three main categories.	1 House 2 Apartment 3 Townhouse (starting 1996) 4 Other, specify 9 Unknown
income	Total household income (considering all sources, before income taxes). Added in the 2016 cycle. The 2016 income ranges with codes 1 to 6 (for \$0-\$14K, \$15-\$39K, \$40-\$59K, \$100-\$124K, and \$125+, respectively) do not match the 2022 income ranges.	1 \$0 to \$14,999 2 \$15,000 to \$39,999 3 \$40,000 to \$59,999 4 \$60,000 to \$79,999 5 \$80,000 to \$99,999 6 \$100,000 to \$124,999 7 \$125,000 to \$149,999 8 \$150,000 to \$199,999 9 \$200,000 and above 99 Decline / don't know

Household Attributes

Field	Description	Values
hhbornincanada	Whether all members of the household were born in Canada. (New question in 2022.)	1 Yes 2 No 99 Decline / don't know
hhstructure	Variable derived from counts of persons of different ages that identifies the household/family structure of the household. (New derived field in 2022.)	1 single person 2 two adults, no children 3 three or more adults, no children 4 single parent, one or more children 0-17 yrs 5 two adults, one or more children 0-17 yrs 6 three or more adults, one or more children 0-17 yrs 99 unsure
n_vehicle	Number of vehicles available to the household Includes: vehicles provided by employers which household members use to go to work or for personal use, or which self-employed household members use for their own business and personal use. Excludes: motorcycles/scooters, bicycles, ATVs, RVs, vehicles not insured to be on the road, or car share vehicles.	0 - 98 99 Unknown
n_adult	Number of adults in the household (18 years of age and older) (New derived field in 2022.)	0 - 98 99 Unknown
n_child	Number of children in the household (0 to 17 years old) (New derived field in 2022.)	0 - 98 99 Unknown
n_licence	Number of people in household who have a driver's licence. 2011 TTS only: The expanded value of this attribute might not match the expanded value based on person attributes. This attribute should only be used as a filter for 2011 tabulations.	0 - 98 99 Unknown

Household Attributes

Field	Description	Values
n_tranpass	Number of people in household with a transit pass. (New derived field in 2022.)	0 - 98 99 Unknown
n_emp_tot	Number of employed people in household. (New derived field in 2022.)	0 - 98 99 Unknown
n_emp_ft	Number of full-time employed people in household. Starting from 1996: it includes full time work at home persons. Prior to 1996: it does not include any work at home persons. 2011 TTS only: The expanded value of this attribute might not match the expanded value based on person attributes. This attribute should only be used as a filter for 2011 tabulations.	0 - 98 99 Unknown
n_emp_pt	Number of part-time employed people in household. Starting from 1996: it includes part time work at home persons. Prior to 1996: it does not include any work at home persons. 2011 TTS only: The expanded value of this attribute might not match the expanded value based on person attributes. This attribute should only be used as a filter for 2011 tabulations.	0 - 98 99 Unknown
n_emp_home	Number of employed people in the household who work exclusively from home. 2011 TTS only: The expanded value of this attribute might not match the expanded value based on person	0 - 98 99 Unknown

Household Attributes

Field	Description	Values
	attributes. This attribute should only be used as a filter for 2011 tabulations.	
n_emp_hft	Number of full-time employed people in the household who work exclusively from home (New derived field in 2022.)	0 - 98 99 Unknown
n_emp_hpt	Number of part-time employed people in the household who work exclusively from home (New derived field in 2022.)	0 - 98 99 Unknown
n_student	Number of students in household (incl. both full time and part time). 2011 TTS only: The expanded value of this attribute might not match the expanded value based on person attributes. This attribute should only be used as a filter for 2011 tabulations.	0 - 98 99 Unknown
n_stu_k12	Number of students in household who are children attending K-12 school. If school level is not known, inclusion in this category is based on student ages 5-17 years. (New derived field in 2022.)	0 - 98 99 Unknown
n_stu_pse	Number of students in household who are attending post-secondary education (PSE) or other courses at a school other than a K-12 school. If school level is unknown, inclusion in based on student ages 18+ years. Note: Not all in this category are necessarily taking post-secondary education. Some may be taking continuing education/training courses, adult basic education, or high school equivalency at schools other than K-12 schools. (New derived field in 2022.)	0 - 98 99 Unknown

Household Attributes

Travel Day		
trip_day	Day of week of data collection	1 Monday 2 Tuesday 3 Wednesday 4 Thursday 5 Friday 9 Unknown (1986, 1991)
trip_week	Week into survey administration when trip data were collected	1 September 13, 2022 (Tuesday) 2 September 19, 2022 3 September 26, 2022 4 October 3, 2022 5 October 11, 2022 (Tuesday) 6 October 17, 2022 7 October 24, 2022 8 October 31, 2022 9 November 7, 2022 * 10 November 14, 2022 11 November 21, 2022 12 November 28, 2022 13 December 5, 2022 14 December 12, 2022 15 December 19, 2022 ** 16 no data collection *** 17 January 3, 2023 (Tuesday) 18 January 9, 2023 19 January 16, 2023 20 January 23, 2023 21 January 30, 2023 22 February 6, 2023 23 February 13, 2023 24 February 21, 2023 (Tuesday) 25 February 27, 2023 26 March 6, 2023 27 March 13, 2023 28 March 20, 2023 29 March 27, 2023 30 April 3, 2023 **** 31 April 10, 2023 32 April 17, 2023 33 April 24, 2023 34 May 1, 2023 35 May 8, 2023

Household Attributes

Field	Description	Values
		36 May 15, 2023 37 May 23, 2023 (Tuesday) 38 May 29, 2023 39 June 5, 2023 40 June 12, 2023 41 June 19, 2023 42 June 26, 2023 43 July 4, 2023 (Tuesday) 44 July 10, 2023 45 July 17, 2023 46 July 24, 2023 * Week starting Nov 7 was a short week (Monday to Thursday only due to Remembrance Day) ** Week starting Dec 19 was a short week (Monday only due to end of fall data collection) *** Data collection was suspended Dec20-Jan2, so there are no surveys in week 16 *** Week starting April 3 was a short week (ended Thursday due to Good Friday)
trip_period	Whether the travel day was in the Fall or Spring data collection period. Note that the Spring period includes a modest number of survey completions obtained between January and March for households that were mailed letters in the Fall and that very late to respond or which were partial completions with follow-up. New field in 2022.	1 Fall 3 Spring
n_pers11up	Number of people in household who are at least 11 years of age. Only for use in comparisons to previous cycles which captured trip information only for persons 11+ years of age. (New derived field in 2022.)	0 - 98 99 Unknown

Household Attributes

Field	Description	Values
n_hh11_trip	Number of trips reported for people in household who are at least 11 years of age. Only for use in comparisons to previous cycles which captured trip information only for persons 11+years of age. <u>Not</u> filtered to exclude walk trips that would not have been collected under 2016 TTS parameters. (New derived field in 2022.)	0 - 98 99 Unknown
n_hhld_trip2016	Number of trips that would have been collected under 2016 parameters. Excludes trips made by children 5 to 10 years of age, and excludes non-commute walk trips (unless they are essential links in commute trip chains or in trip chains with other modes or accompany another household member on their commute). (New derived field in 2022.)	0 - 98 99 Unknown
n_pers5up	Number of people in household who are at least 5 years of age and eligible for trip capture	0 - 98 99 Unknown
n_hhld_trip	Total number of trips reported. 2022 data includes trips for all persons 5+ years of age. 1986 data includes trips for all persons 6+ years of age. All other cycles include trips for persons 11+ years of age.	0 - 98 99 Unknown
n_hdrvr_trip	Number of trips via auto driver made by household members 5+ years. (New derived field in 2022.)	0 - 98 99 Unknown
n_hpsgr_trip	Number of trips via auto passenger made by household members 5+ years. (New derived field in 2022.)	0 - 98 99 Unknown
n_htran_trip	Total number of transit trips made by household members = sum of GO Train + Joint GO Train/Other Transit + Other-Transit-only trips. (New derived field in 2022.)	0 - 98 99 Unknown

Household Attributes

Field	Description	Values
n_hgotr_trip	Number of GO-Train-only trips made by household members 5+ years. (New derived field in 2022.)	0 - 98 99 Unknown
n_hjgot_trip	Number of joint GO Train and other transit trips made by household members 5+ years. (New derived field in 2022.)	0 - 98 99 Unknown
n_hloct_trip	Number of trips via public transit that did not involve GO Train made by household members 5+ years. (New derived field in 2022.)	0 - 98 99 Unknown
n_hbike_trip	Number of cycling and e-micromobility trips made by household members 5+ years. (New derived field in 2022.)	0 - 98 99 Unknown
n_hwalk_trip	Number of walking trips made by household members 5+ years. (New derived field in 2022.)	0 - 98 99 Unknown
n_hothm_trip	Number of trips via other modes made by household members 5+ years. (New derived field in 2022.)	0 - 98 99 Unknown
Household Weighting Factor		
hhld_expf	Household weighting factor to use for analysis. The household weighting factor incorporates a number of weighting controls for household and demographic characteristics beyond the base geographic expansion weight.	

5.2 Person Attributes

The following data were collected or calculated for each person in the households surveyed in 2022. The attributes and categories are the same for all surveys except as noted.

Table 5-2 Person Attributes

Persons attributes

Field	Description	Values
Identifiers		
hhld_num	Household unique numeric ID	A 6-digit unique identifier
pers_num	Person number within the household	1-11
hp_num	Person unique numeric ID	An eight-digit unique identifier composed of [hhld_num][pers_num from 00 to 11]
Demographics		
respond	Respondent status (household member who provided information)	T Respondent F Not a respondent (i.e. information was reported by another member of the household)
sex	Gender variable for alignment with 2016 response code convention In 2022 onwards, “Men+” = Men and boys plus and a portion of persons who indicated non-binary, preferred to self-describe, or who declined to answer, and “Women+” = women or girls plus and a portion of persons who indicated non-binary, preferred to self-describe, or who declined to answer.	M Men+ (“male” in 2016 and earlier) F Women+ (“female” in 2016 and earlier) 9 Unknown
sex_orig	Survey response to the gender question	1 Male 2 Female 3 Non-binary (starting in 2022) 4 Prefer to self-describe (starting in 2022) 99 Decline
age	Specific age given on the survey, or imputed age if the respondent preferred to give an age range.	0 99 97 Aged 97 and older (1986) 98 Aged 98 and older (starting from 1991) 99 Unknown

Persons attributes

Field	Description	Values
		(In 1991 age 1 included all persons under 2 years of age)
age_range	Five-year age range based on age	4 00 to 04 years 509 05 to 09 years 1014 10 to 14 years 1519 15 to 19 years 2024 20 to 24 years 2529 25 to 29 years 3034 30 to 34 years 3539 35 to 39 years 4044 40 to 44 years 4549 45 to 49 years 5054 50 to 54 years 5559 55 to 59 years 6064 60 to 64 years 6569 65 to 69 years 7074 70 to 74 years 7579 75 to 79 years 8084 80 to 84 years 8589 85 to 89 years 9094 90 to 94 years 9599 95+ years
Transport-Related		
driver_lic	Possession of a drivers license	0 Not asked (too young for driver's licence) 9 Don't Know N No Y Yes
tran_pass	Possession of a transit pass (starting from 1996) Note that the codes differ from previous cycles in that in 2022 this question was asked as a yes/no question, whereas there were various kinds of transit passes listed in 2016. In 2016 and earlier, persons under the age of 11 were not asked this question, and answer was assumed to be no; in 2022,	N No Y Yes X Not asked (under 6 years of age) 9 Decline / don't know C Combination or Dual Pass (until 2016) G GO Transit Pass (until 2011) M Metro Pass (until 2016) O Other Agency Pass (until 2016) P Presto (2016 only)

Persons attributes

Field	Description	Values
	the question was asked of ages 6 and above.	
Occupation Status		
occstat	Status of the person's employment, student status and age, combined into a single variable. (New derived field in 2022.)	1 Work full-time (30 or more hours per week) 2 Work part-time (less than 30 hours per week) 10 Student full-time 11 Student full-time and work full-time 12 Student full-time and work part-time 20 Student part-time 21 Student part-time and work full-time 22 Student part-time and work part-time 30 Not employed and not a student 35 Not employed and student status unknown 75 Young school age child but not a student (age between 5 and 13; possible if has a severe disability or if 5 years old in Spring 2023 data collection period and not yet in school) 77 Not applicable 0-4 years
emp_stat	Employment status of person using 2016 code convention. In 1986 a person could be recorded as employed or a student but not both Since 1991, combinations of employment and student status were allowed	F Full time H Work at home full-time J Work at home part-time O Not employed P Part time 9 Unknown (Persons under 11 are assumed not to be employed)

Persons attributes

Field	Description	Values
stu_stat	<p>Student status of person using 2016 code convention.</p> <p>In 1986 a person could be recorded as employed or a student but not both.</p> <p>Starting from 1991, combination of employment and student status was allowed</p>	<p>9 Unknown</p> <p>0 Not a student</p> <p>P Part-time student</p> <p>S Full-time student</p> <p>(Persons between 0 and 5 are coded as 'not a student')</p> <p>(Up to 2016, persons between 6 and 10 were assumed to be full time students)</p>
Work Information		
occupation2022	<p>Person's occupation type (detailed)</p> <p>(New numeric field for occupation with new responses options in 2022.)</p>	<p>0 Not employed</p> <p>1 Business, finance, natural and applied sciences</p> <p>2 health care, education, law, community or social services, art, culture, recreation, and sports occupations</p> <p>3 Management</p> <p>4 Technical and Paraprofessional</p> <p>5 Administration and administrative support</p> <p>6 Sales</p> <p>7 Personal service or customer information service</p> <p>8 Industrial, construction, or equipment operation trade</p> <p>9 Worker or labourer in transport and construction</p> <p>10 Natural resources, agriculture and related production operation occupations</p> <p>11 Occupations in manufacturing and utilities</p> <p>77 Other</p> <p>99 Decline / Don't Know</p>
occupation	<p>Person's broad occupation type (starting in 1996)</p> <p>Text version of occupation type using 2016 code convention</p>	<p>9 Unknown</p> <p>G General Office / Clerical</p> <p>M Manufacturing / Construction / Trades</p> <p>O Not employed</p>

Field	Description	Values
	(This derived field and the related individual response indicator fields that follow below are new in 2022.)	77 Other, please specify - not reclassified 99 Don't know or refused
Work Commute		
workcommute	Indicator variable to show if person commuted to work or travelled for work purposes during the last week. (New derived field in 2022.) Work commute questions were asked of those with a usual workplace. People who work exclusively from home and those who have a fixed workplace outside the home were not asked if they travelled to/for work in the last week.	1 commuted on at least one weekday last week 77 Did not travel to or for work at all in the last week 88 No usual workplace or not a worker 99 Don't know
wrkcmom	Whether traveled to/for work on Monday last week (New question in 2022.)	0 No 1 Yes 9 Don't Know / Refused 0 no usual workplace or not a worker
wrkctue	Whether traveled to/for work on Tuesday last week (New question in 2022.)	0 No 1 Yes 9 Don't Know / Refused 0 no usual workplace or not a worker
wrkcwed	Whether traveled to/for work on Wednesday last week (New question in 2022.)	0 No 1 Yes 9 Don't Know / Refused 0 no usual workplace or not a worker
wrkcthur	Whether traveled to/for work on Thursday last week (New question in 2022.)	0 No 1 Yes 9 Don't Know / Refused 0 no usual workplace or not a worker
wrkcfri	Whether traveled to/for work on Friday last week	0 No 1 Yes 9 Don't Know / Refused

Persons attributes

Field	Description	Values
	(New question in 2022.)	0 no usual workplace or not a worker
n_wcommdays	Number of weekdays selected in wrkcmon through wrkcfri (New derived field in 2022.)	0-5 88 Not applicable 99 Don't known
wcomm_lastwk	Work travel pattern last week, with a value of 0 or 1 for each day of the week for 'did not commute or travel for work' and 'commuted or travelled for work' respectively (concatenates wrkcmon through wrkcfri) (New derived field in 2022.)	00000 did not travel to/for work on any day 00001 travelled to/for work on Friday only 00010 travelled to/for work on Thursday only 00011 travelled to/for work on Thursday and Friday ...etc... 11111 traveled to/for work on all five weekdays 99999 Unknown 0 Not applicable (no usual workplace or not a worker)
Travel on Travel Day		
made_trips	Whether person reported travel on their travel day	0 No, Did not travel 1 Yes, took trips 2 Too young to capture trips
sch_trip	Whether person had at least one trip to school on their travel day (New derived field in 2022.)	0 No 1 Yes
work_trip	Whether person had at least one trip to work or for work-related purposes on their travel day (New derived field in 2022.)	0 No 1 Yes
no_work	Whether employed person who does not exclusively work from home and who did not make a work trip on their travel day worked from home. (starting in 1996) (Note that in 2016 and earlier survey	N No Y Yes O Not applicable 9 Unknown

Persons attributes

Field	Description	Values
	cycles the related questions were only asked of full-time employed persons.)	
n_pers_trip	Number of trips reported for this person (1986 data includes persons aged 6-10)	0 - 98 99 Unknown
n_tran_trip	Number of trips reported with primary mode of public transit (whether GO Train or other public transit) (1986 data includes persons aged 6-10)	0 - 98 99 Unknown
n_gotr_trip	Number of trips with primary mode of GO Train and did not use other transit (New derived field in 2022.)	0 - 98 99 Unknown
n_jgot_trip	Number of trips with primary mode of GO Train and used other transit (New derived field in 2022.)	0 - 98 99 Unknown
n_loct_trip	Number of trips with primary mode of Transit and did not use GO Train (New derived field in 2022.) Note: this differs from n_tran_trip above which combines cases with primary modes of Transit, GO Train, and JointGOTrain and transit	0 - 98 99 Unknown
n_drvr_trip	Number of trips via auto driver (New derived field in 2022.)	0 - 98 99 Unknown
n_psg_r_trip	Number of trips via auto passenger (New derived field in 2022.)	0 - 98 99 Unknown
n_bike_trip	Number of cycling or electric micromobility trips (New derived field in 2022.)	0 - 98 99 Unknown
n_walk_trip	Number of walking trips (New derived field in 2022.)	0 - 98 99 Unknown

Persons attributes

Field	Description	Values
n_othm_trip	Number of trips via other modes (New derived field in 2022.)	0 - 98 99 Unknown
n_pers_trip2016	Number of trips that would have been collected under 2016 parameters. Excludes non-commute walk trips unless they are essential links in commute trip chains or in trips chains using other modes or accompany another household member on their commute. Set to zero (0) for persons 5 to 10 years of age, as they were excluded from trip capture in 2016. (New derived field in 2022.)	0 - 98 99 Unknown
n_walk_trip2016	Number of walking trips that would have been collected under 2016 TTS parameters. Excludes non-commute walk trips unless they are essential links in commute trip chains or in trip chains using other modes or accompany another household member on their commute. Set to zero (0) for persons 5 to 10 years of age, as they were excluded from trip capture in 2016. (New derived field in 2022.)	0 - 98 99 Unknown

5.3 Trip Attributes

The following data were collected or calculated for each trip made on the trip day for each person 5 years old and older in the households surveyed in 2022. The attributes and categories are the same for all surveys except as noted. Trip information was collected for household members 6 years old and over in 1986, and 11 and older from 1991 to 2016. In 2022, trips were collected from those household members 5 years old and over. From 1986 to 2016, trips were collected for all trips made by motorized means, but only for walking trips that were either to or from work or school or if they connected other eligible trips (in other words, a ‘round trip’ journey made entirely via walking would not be captured as a trip in this survey). In 2022, the TTS included walking trips for non work/school purposes (while continuing to exclude recreational walk trips).

Table 5-3 Trip Attributes

Trip Attributes

Field	Description	Values
Identifiers		
hhld_num	Household unique numeric ID	6-digit number
pers_num	Person number within the household	1-11
trip_num	Trip number for this person in sequence based on the depart time	1-99
hp_num	Person unique numeric ID	An 8-digit unique identifier composed of [hhld_num][pers_num from 00 to 11]
hpt_num	Trip unique numeric ID	A 10-digit unique identifier composed of [hhld_num][pers_num from 00 to 11][trip_num from 00 to 19]
lasttrip	Indicates last trip in this person’s trip chain	1 Yes 0 No
Trip Details		
start_time	Trip departure time	24-hour clock from 0400 to 2759, where 2400 to 2759 are from midnight to 3:59 a.m. of the next calendar day 9999 Unknown
mode_prime	Primary mode of the trip Note that there are three public transit modes: public transit, GO Train, and joint public transit and GO Train	B Public Transit (excluding GO Rail) C Bicycle D Auto Driver E E-scooter or other electric mobility device (new in 2022) G GO Rail

Trip Attributes

Field	Description	Values
	<p>GO Train and joint GO Train were not specific responses on the survey, but were reassignments of responses of Transit when GO Train was noted amongst the routes taken.</p> <p>If any part of the trip is made by public transit the primary mode is defined as B,G or J,</p>	<p>J Joint GO Rail and Public Transit M Motorcycle O Other P Auto Passenger S School Bus T Taxi U Paid rideshare (Uber, Lyft, DriverHer, or other paid rideshare app) (since 2016) W Walk 9 Unknown</p>

Field	Description	Values
mun_dest	TTS Municipal Area	See list in Geography section
pd_dest	TTS Planning Districts	See list in Geography section
tts22_dest	TAZ transportation analysis zones	See lookup table in database
gta06_dest	2006 TAZ	See lookup table in database
ward_dest	Municipal Wards	See list in Geography section
Other Details, Distances		
car_pool	Number of people in the vehicle - only applied to auto driver trip	0-10 99 Unknown
hwy407	Use of Hwy 407 for any part of an auto drivers trip. (Since 2011) Question was only asked if the mode was auto driver. Asked of a subsample of all trips completed on or after 2023-05-11 that appeared to have origin and destination locations such that using the highway was a possibility.	Y Yes N No O Not applicable (origin and destination pattern did not trigger the question) 7 Not asked in earlier surveys 9 Unknown
trip_km	Euclidean (straight-line) distance between origin and destination coordinates	Value in kilometers 9999 Unknown
trip_m	Euclidean (straight-line) distance between origin and destination coordinates	Value in meters 9999 Unknown
trip_man_km	Manhattan distance between origin and destination coordinates	Value in kilometers 9999 Unknown
trip_man_m	Manhattan distance between origin and destination coordinates	Value in meters 9999 Unknown
Trip Flags		
excl2016	Indicates trips that would be excluded from analysis when comparing to 2016 and earlier. Indicates trips made by persons between the ages of 5 and 10, and walking trips that are not to or from work or school (and not essential links in trip chains to or from work or school or trip chains with other modes and not accompanying another household member on their trip to or from school).	0 Include in 2016 comparisons 1 Exclude from 2016 comparisons due to age between 5 and 10 2 Exclude from 2016 comparisons due to non-commute walking trip made by person 11+ years of age

5.4 Transit Attributes

The following data were collected or calculated for each trip made by public transit on the trip day for each person 5 years old and over in the households surveyed in 2022. For public transit trips, detailed information was collected on the routes and the location of transfer points. The attributes and categories are the same for all surveys except as noted. Trip information was collected for household members 6 years old and over in 1986, and 11 and older from 1991 to 2016. In 2022, trips were collected from those household members 5 years old and over.

Access/Egress Coordinates: For rail trips on public transit (via TTS Subway or Scarborough RT, or via GO Train) the rail boarding and alighting stations were asked on the survey. If the first transit route boarded was rail, the transit access location coordinates assigned were those of the boarding station. If the last transit route boarded was rail, the transit egress location coordinates assigned were those of the alighting station. In all other instances, the access and egress location coordinates are those of the trip origin and destination. In other words, for non-rail transit trips, the actual transit boarding/alighting locations were not captured, and the trip origins/destinations are used as a proxy for the actual locations.

Table 5-4 Transit Attributes

Transit attributes

Field	Description	Values
Identifiers		
hhld_num	Household unique numeric ID	6-digit number
pers_num	Person number within the household	1-11
trip_num	Trip number for this person in sequence based on the depart time	1-19
hp_num	Person unique numeric ID	An 8-digit unique identifier composed of [hhld_num][pers_num from 00 to 11]
hpt_num	Trip unique numeric ID	A 10-digit unique identifier composed of [hhld_num][pers_num from 00 to 11][trip_num from 00 to 19]
Transit Access Modes		
mode_accs	Mode used to access public transit, using 2016 text code convention	9 Unknown C Cycle D Auto driver

Transit attributes

Field	Description	Values
		E E-scooter or other electric mobility device (new in 2023) M Motorcycle O Other P Auto passenger S School bus T Taxi passenger U Paid rideshare W Walk
mode_egrs	Mode used after disembarking from public transit, using 2016 text code convention	9 Unknown C Cycle D Auto driver E E-scooter or other electric mobility device (new in 2023) M Motorcycle O Other P Auto passenger S School bus T Taxi passenger U Paid rideshare W Walk
tran_grp	For convenient reference, the combination of access mode, primary mode, and egress mode, using the 2016 text-based response code convention	Format of [access mode code]-[primary mode code]-[egress mode code] E.g., "C-G-C" See 2016 mode list in trips table
tran_type	Examining both access and egress modes, the overall transit access type, with other modes taking precedence over walk with the following hierarchy: drive, passenger, bicycle, other. E.g.: If walk at both ends, it is considered 'walk-access transit'. If drive to access point and walk from egress point, then the overall trip is considered 'drive-access transit'. The same is true if or if walk to access point and drive from egress point.	1 Walk-access transit (WAT) 2 Drive-access transit (DAT) 3 Drive-access transit - Passenger (DAT-P) 4 Bicycle-access transit (BAT) 5 Other-access transit (OAT)

Transit attributes

Field	Description	Values
Access/Egress Points		
first_accs_stn	First access station for either TTC Subway or GO Train/UP Express, if used in Route1	See list of stations 0 First boarding location was not a subway or GO station (geocodes used are from origin)
region_accs	Region of access point	See list in Geography section
pd_accs	Planning district of access point	See list in Geography section
tts22_accs	TAZ of access point	See lookup table in database
gta06_accs	2006 TAZ	See lookup table in database
accs_m	Straight-line distance from origin to access point in metres	
accs_man_m	Manhattan distance from origin to access point in metres	
last_egrs_stn	Last alighting station for either TTC Subway or GO Train/UP Express if used in last route taken	See list of stations 0 Last alighting location was not a subway or GO station (geocodes used are from destination)
region_egrs	Region of egress point	See list in Geography section
pd_egrs	Planning district of egress point	See list in Geography section
tts22_egrs	TAZ of egress point	See lookup table in database
gta06_egrs	2006 TAZ	See lookup table in database
egrs_m	Straight-line distance from egress point to destination in metres	
egrs_man_m	Manhattan distance from egress point to destination in metres	
Transit Routes		
n_route	Number of transit routes or links used for the trip	1-6
route1	Route used for first link	See list of route codes
route2	Route used for second link	See list of route codes
route3	Route used for third link	See list of route codes

Transit attributes

Field	Description	Values
route4	Route used for fourth link	See list of route codes
route5	Route used for fifth link	See list of route codes
route6	Route used for sixth link	See list of route codes
last_route	Route used on the last link, whether route 1 through route 6	See list of route codes
Subway, GO Stations		
sub_on	TTC subway boarding station (starting from 2001)	See list of stations
sub_off	TTC subway alighting station (starting from 2001)	See list of stations
go_on	GO Train/UP Express boarding station (starting from 2001)	See list of stations
go_off	GO Train/UP Express alighting station (starting from 2001)	See list of stations
Route Counts		
n_go_rail	Number of links on GO Train	0-5
n_go_bus	Number of links on GO Bus	0-5
n_subway	Number of links on TTC subway	0-5
n_ttc_bus	Number of links on TTC bus or streetcar	0-5
n_local	Number of links on other local transit (i.e., non-TTC and non-GO)	0-5
n_other	Number of links on other transit systems (i.e., VIA, Grey Coach)	0-5
oper_code	Agency operating the last transit route used	See list of agencies
use_ttc	TTC trip. Uses either TTC bus/streetcar or TTC subway.	Y Yes N No

5.5 Station Codes

Station codes for the GO Train and TTC Subway systems are listed below, along with the lines served. The key to the line abbreviations follows the table. Some station codes refer to colocated stations on both systems or which serve multiple lines on the same system. These are highlighted in bold text.

Table 5-5 GO Train and TTC Subway Station Codes

Stations

Code	Station	System(s)	Line(s)
0	Not Applicable (service not used)		
GS01	Oshawa	GO	LE
GS02	Hamilton	GO	LW
GS03	Burlington	GO	LW
GS04	Appleby	GO	LW
GS05	Bronte	GO	LW

SS76	Highway 407	TTC	YUS-W
SS77	Vaughan Metropolitan Centre	TTC	YUS-W

Note: Stations serving multiple lines and/or systems are highlighted in **bold**.

Line abbreviations:

TTC Subway	YUS-E	Yonge-University-Spadina line East
	YUS-W	Yonge-University-Spadina line West
	BLD	Bloor-Danforth line
	SRT	Scarborough RT Line (SRT)
	SHP	Sheppard line
	GO Train	BR
KI		Kitchener Line
LE		Lakeshore East Line
LW		Lakeshore West Line
MI		Milton Line
RH		Richmond Hill Line
ST		Stouffville Line
UP		UP Express

Note: The Scarborough RT line was in service during 2022 TTS data collection. It ceased operation in August 2023.

5.6 Transit Operator Codes

The following transit operator codes are used in the oper_code field noting the last non-TTC and non-GO transit routes recorded in the transit table. TTC and GO route prefixes are listed for completeness below, but do not show up in the oper_code field.

Table 5-6 Transit Operator Codes

Transit Operators

Operator	Operator Code	Route Prefix
Not Applicable	0	Not Applicable
TTC		T (note that T59 is the prefix for SUBWAY)
GO		GB (GO BUS), GT0 (GO TRAIN), GT10 (UP EXPRESS)

		XT PRIVATE BUS
		XU OTHER PRIVATE

*Note: In January 2023, Niagara Region Transit, Fort Erie Transit, Niagara Falls Transit, St. Catharines Transit, Welland Transit merged, with Niagara Region transit assuming the operation of the routes a single unified local transit service for the region.

5.7 Transit Route Codes

The following lists contain only operator and route codes for route responses in the 2022 TTS. The lists therefore do not necessarily include all routes in the respective transit system or those used in previous surveys. Some routes may have been identified by multiple variations of the route names but are identified below with the first route name in the database of routes used for surveying. **The numbers listed are the expanded 24-hour totals from the 2022 survey.** The totals are not official ridership counts.

Table 5-7 Transit Route Codes

Transit Routes

Code	Route Name	Route 1	Route 2	Route 3	Route 4	Route 5	Route 6	Total

6 UNWEIGHTED AND WEIGHTED FREQUENCY COUNTS

6.1 Household Tabulations

The following tabulations are “number of households” stratified by various categories in the database. The “Number of Records” is the actual number of survey records in the Household file while the “Expanded Frequency” is the total after the expansion factors have been applied. Expanded totals for 2011 only are not valid and are excluded from the tabulations. For all other years, the expanded totals are valid.

Household Tabulations

Table 6-1 Sample type

Variable: samplotype (Sample Type)		No of Records						Expanded Frequency						2022%
Code	Description	1986	1996	2006	2011	2016	2022	1986	1996	2006	2011	2016	2022	of Total
1	Address and phone	61453	115193	149631	159157	82460	61338					1549625	1209431	32.9%
2	Address only					79226	96719					1762916	2448588	66.6%
3	Phone only					956						22130		
7	Volunteer					66	605					1319	15846	0.4%
	Total	61453	115193	149631	159157	162708	158662					3335990	3673865	

Household Tabulations

Table 6-2 Survey method

Variable: surveymethod (how survey was completed)														
Code	Description	No of Records						Expanded Frequency						2022% of Total
		1986	1996	2006	2011	2016	2022	1986	1996	2006	2011	2016	2022	
1	Telephone	61453	115193	149631	132294	56346	13191					1071660	261422	7.1%
2	Online				26863	103256	117390					2207739	2653719	72.2%
3	Mobile						22041						635793	17.3%
4	Mixed Mode (Online/Phone)*					2867	4381					52448	79661	2.2%
5	Mixed Mode (Mobile/Phone)						697						16603	0.5%
6	Mixed Mode (Online/Mobile)						962						26667	0.7%
9	Unknown					239						4143		
	Total	61453	115193	149631	159157	162708	158662					3335990	3673865	

*Survey completion method values for 2016 used different response codes. 2016 values for 'start online, end by phone' (code 3) and 'start by phone, end online' (code 4) are collapsed into the 2022 equivalent of 'Mixed Mode (Online/Phone)' (2022 code 4). The 2011 and 2016 data do not differentiate between online (PC) and mobile completions.

6.2 Person Tabulations

The following tabulations are “number of persons” stratified by various categories in the database. The “Number of Records” figures present the actual number of survey records in the Person file while the “Expanded Frequency” figures are the expanded results representing the universe.

Person Tabulations

Table 6-43 Response status

Variable: respond (respondent status - household member provided their own information)														
Code	Description	No of Records						Expanded Frequency						2022% of Total
		1986	1996	2006	2011	2016	2022	1986	1996	2006	2011	2016	2022

6.3 Trip Tabulations

The following tabulations are “number of trips” stratified by various categories in the database. The “Number of Records” figures present the actual number of survey records in the Trip file while the “Expanded Frequency” figures are the expanded results representing the universe. Trips are collected for persons aged 6 and over in 1986 and for persons aged 11 and over from 1991 to 2016. In 2022, trips were collected from those household members 5 years old and over.

From 1986 to 2016, trips were collected for all trips made by motorized means, but only for walking trips that were either to or from work or school or if they connected other eligible trips (in other words, a ‘round trip’ journey made entirely via walking would not be captured as a trip in these surveys). In 2022, the TTS included walking trips for non work/school purposes (while continuing to exclude recreational walk trips).

To facilitate longitudinal comparisons, 2022 results are presented two ways: filtered to 2016-equivalent trips, i.e., excluding trips made by persons 6-10 and non-commute walking trips (‘2016 equiv.’ column) and for all trips captured in 2022 (‘all trips’ column).

Trip Tabulations

	Total						759736						19470493	

6.4 Transit Tabulations

The following tabulations are “number of transit trips” stratified by various categories in the database. The “Number of Records” figures present the actual number of survey records in the Transit file while the “Expanded Frequency” figures are the expanded results representing the universe. Trips are collected for persons aged 6 and over in 1986 and for persons aged 11 and over in 1991 to 2016. In 2022, trips were collected from those household members 5 years old and over. To facilitate longitudinal comparisons, 2022 results are presented two ways: filtered to 2016-equivalent trips, i.e., excluding trips made by persons 6-10 and non-commute walking trips (‘2016 equiv.’ column) and for all trips captured in 2022 (‘all trips’ column).

*In January 2023, Niagara Region Transit, Fort Erie Transit, Niagara Falls Transit, St. Catherines Transit, Welland Transit merged, with Niagara Region transit assuming the operation of the routes a single unified local transit service for the Niagara Region.

Total Boardings is the sum of boardings for the transit operator across 'Route 1' through 'Route 6', where Route 1 is the first transit route boarded in a given trip, Route 2 is the second transit route boarded, and so on.

Total Trips is the number of trips that used at least one service run by the transit operator on any of the routes. A trip that used two or more routes run by the given transit operator is only counted once. These numbers do not match the total in the previous tabulations due to multiple counting of trips when a combination of transit services was used (i.e. the same individual trip is counted once for each transit service used).
